**STUDI KUALITATIF: PERSEPSI LANSIA TERHADAP VAKSINASI COVID-19 DI
KELURAHAN PASIE NAN TIGO KECAMATAN KOTO TANGAH KOTA PADANG**

ABSTRAK

Realisasi vaksinasi untuk warga lanjut usia di Sumatera Barat masih rendah. Berdasarkan data dari Dinas Kesehatan Sumbar hingga November 2021, realisasi vaksinasi lansia baru mencapai 20,88 persen dari target 488.575 orang untuk tahap I dan untuk vaksinasi tahap II yaitu 7,6 persen. Persepsi yang salah, pengetahuan yang kurang, serta informasi yang kurang menjadi penyebab kurangnya kepatuhan lansia dalam mengikuti program vaksinasi COVID-19. Tujuan penelitian ini adalah untuk mengeksplorasi persepsi lansia di RW 14 Kelurahan Pasie Nan Tigo terhadap vaksinasi COVID-19. Jenis penelitian ini adalah penelitian kualitatif dengan pendekatan studi fenomenologi dengan metode *purposive sampling*. Jumlah partisipan dalam penelitian ini sebanyak 4 orang lansia di RW 14 Kelurahan Pasie Nan Tigo. Hasil penelitiannya didapatkan 3 (tiga) tema yaitu keterbatasan pengetahuan lansia tentang vaksinasi COVID-19, ketidaksiapan lansia dalam mengikuti program vaksinasi, dan kurangnya dukungan keluarga. Diharapkan dengan adanya penelitian ini, pelayanan yang diberikan oleh puskesmas lubuk buaya lebih baik lagi terutama dalam memberikan edukasi atau pendidikan kesehatan kepada masyarakat terutama lansia terkait vaksinasi COVID-19.

**QUALITATIVE STUDY: THE ELDERLY PERCEPTIONS OF THE COVID-19
VACCINATION IN PASIE NAN TIGO, KOTO TANGAH, KOTA PADANG**

ABSTRACT

The realization of vaccination for the elderly in West Sumatra is still low. Based on data from the Dinas Kesehatan Sumbar until November 2021, the realization of vaccination for the elderly has only reached 20.88 percent of the target of 488,575 people for stage I and for stage II vaccination, which is 7.6 percent. Wrong perceptions, lack of knowledge and information are the causes of the elderly's lack of obedience participating in the COVID-19 vaccination program. The purpose of this study is to explore the perception of the elderly in RW 14, Pasie Nan Tigo Village on the COVID-19 vaccination. This type of research is qualitative research with a phenomenological study approach with the deep interview method. The selection of participants was purposive sampling method. The number of participants in this study were 4 elderlys in RW 14, Pasie Nan Tigo Village. The results of the research obtained 3 (three) themes, the limited knowledge of the elderly about COVID-19 vaccination, the unpreparedness of the elderly in participated in the vaccination program, and the lack of family support. It is hoped that with this research, the services provided by the Lubuk Buaya health center will be even better, especially in providing education or health education to the community, especially the elderly regarding the COVID-19 vaccination.
