**ABSTRAK**

Pemberian vaksinasi COVID-19 *Coronovac* produksi *Sinovac* untuk anak usia 6 sampai 11 tahun, memunculkan berbagai macam persepsi orang tua. Orang tua tidak akan memvaksinasi anaknya karena takut akan efek dan resiko setelah di vaksinasi, takut vaksinasi membuat anaknya cacat, dan juga ada yang mengatakan akan memvaksin anaknya karena tuntutan dari proses belajar mengajar (PBM) yang mengharuskan anak usia sekolah divaksinasi COVID-19. Penelitian ini bertujuan untuk melihat bagaimana persepsi orang tua yang memiliki anak usia 6 sampai 11 tahun terhadap vaksin di RW 03 Pasie Nan Tigo, Kecamatan Koto Tangah, Kota Padang. Metode penelitian berupa metode kualitatif dengan pendekatan fenomenologi dengan melibatkan metode eksplorasi langsung. Teknik pengambilan partisipan menggunakan teknik *purposive sampling*, didapatkan 5 partisipan, berdasarkan kriteria inklusi yaitu orang tua yang memiliki anak usia 6 sampai 11 tahun yang berada di RW 03 Pasie Nan Tigo dan orang tua yang salah satunya sudah melakukan vaksin COVID-19. Teknik pengumpulan data menggunakan wawancara mendalam (*In-Depth Interview*). Hasil wawancara ditranskrip secara verbatim dan diolah sehingga menghasilkan 3 tema yaitu: 1) pengetahuan orang tua tentang COVID-19. 2) pengetahuan orang tua tentang vaksinasi COVID-19. 3) persepsi orang tua terhadap kurangnya penerimaan vaksinansi COVID-19 pada anak usia 6-11 tahun. Diharapkan dengan adanya penelitian ini, tenaga kesehatan mampu untuk meningkatkan edukasi tentang vaksinasi COVID-19 kepada orang tua meliputi; efek vaksinasi, tujuan dan manfaat dari vaksinasi COVID-19 pada anak dan klarifikasi isu tentang vaksinasi COVID-19 sehingga masyarakat terutama orang tua mendapatkan vaksinasi COVID-19.

**PERCEPTIONS OF PARENTS WHO HAVE CHILD AGES 6 TO 11 YEARS ON THE  
COVID-19 VACCINE IN RW 03 KELURAHAN PASIEN NAN TIGO, KOTO TANGAH  
DISTRICT**

**ABSTRACT**

The provision of the Sinovac COVID-19 Coronavac vaccination for children aged 6 to 11 years has raised various perceptions of parents. Parents will not vaccinate their children for fear of the effects and risks after being vaccinated, afraid that vaccination will make their children disabled, and some will vaccinate their children because of the teaching and learning process (PBM) which requires school-age children to be vaccinated against COVID-19. This study aims to see how the perception of parents who have children aged 6 to 11 years towards vaccines in RW 03 Pasie Nan Tigo, Koto Tangah District, Padang City. The research method is a qualitative method with a phenomenological approach involving direct exploration methods. The technique for taking participants was using a purposive sampling technique, 5 participants were obtained, based on inclusion criteria, namely parents who have children aged 6 to 11 years who are in RW 03 Pasie Nan Tigo and parents, one of whom has received the COVID-19 vaccine. Data collection techniques using in-depth interviews. The results of the interviews were transcribed verbatim and processed to produce 3 themes, namely: 1). Parental knowledge about COVID-19 2). Knowledge of parents about COVID-19 vaccination 3). Parents' perception of the lack of acceptance of COVID-19 vaccination in children aged 6-11 years. It is hoped that with this research, health workers will be able to improve education about COVID-19 vaccination to parents, including; the effect of vaccination, the purpose and benefits of COVID-19 vaccination for children and clarification of issues regarding COVID-19 vaccination so that the public, especially parents, get the COVID-19 vaccination.
