EVALUASI PELAKSANAAN STANDAR PELAYANAN MINIMAL PENYAKIT HIPERTENSI DI PUSKESMAS AIR DINGIN KOTA PADANG TAHUN 2022

xii+ 96 halaman, 14 tabel, 2 gambar, 13 lampiran

ABSTRAK

Tujuan Penelitian

Puskesmas Air Dingin merupakan puskesmas dengan capaian Standar Pelayanan Minimal Hipertensi terendah di Kota Padang pada tahun 2020 dengan persentase capaian 21 %. Tujuan penelitian ini adalah mengevaluasi pelaksanaan SPM Penyakit Hipertensi di Puskesmas Air Dingin Kota Padang Tahun 2022.

Metode

Jenis penelitian kualitatif dengan informan penelitian sebanyak 8 orang. Teknik penentuan informan dengan *purposive sampling*. Metode pengumpulan data dengan wawancara mendalam, telaah dokumen dan observasi. Analisis data dilakukan dengan *content analysis*, untuk keabsahan data dilakukan triangulasi.

Hasil

Pelaksanaan SPM Hipertensi berpedoman kepada Permenkes RI Nomor 4 Tahun 2019, namun belum semua petugas mengetahui terkait kebijakan yang berlaku. Standar tenaga belum mencukupi dan ditemukan beban kerja ganda. Dana belum mencukupi. Sarana dan prasarana belum memadai. Pengukuran dan pemantauan tekanan darah pasien belum optimal dilakukan oleh petugas. Edukasi sudah dilakukan namun pelaksanaannya belum optimal. Terapi farmakologi sudah diberikan sesuai dengan kebijakan yang berlaku.

Kesimpulan

Pelaksanaan SPM Hipertensi perlu diperbaiki dari aspek pemahaman petugas terkait kebijakan, tenaga, dana, sarana prasarana, pemantauan pasien, dan edukasi. Diharapkan Puskesmas Air Dingin dapat mengoptimalkan pemantauan pasien hipertensi dengan memperbaiki struktural kerja petugas, meningkatkan komitmen petugas dan mengalokasikan dana dalam pemantauan pasien.

EVALUATION OF THE IMPLEMENTATION OF MINIMUM SERVICE STANDARDS FOR HYPERTENSION IN THE PADANG CITY AIR DINGIN PRIMARY HEALTH CARE IN 2022

xii + 96 pages, 14 tables, 2 pictures, 13 appendices

ABSTRACT

Objective

Air Dingin Primary Healthcare is Primary Health Care with the lowest Minimum Service Standards for Hypertension in the city of Padang in 2020 with a percentage of 21 %. The purpose of the study is to evaluate the implementation of the minimum service standards for hypertension in the Padang city Air Dingin Primary Health Care in 2022.

Method

This type of qualitative research with 8 informants. The technique of determining informants with purposive sampling. Methods of data collection with in-depth interviews, document review, and observations. Data analysis was done by content analysis, triangulation was carried out for the validity of the data.

Result

The implementation of the Minimum Service Standard for Hypertension is guided by the Minister of Health of the Republic of Indonesia Number 4 of 2019, but not all officers are aware of the applicable policies. The power standard is not sufficient and a double workload is found. Funds are not sufficient. Inadequate facilities and infrastructure. Measuring and monitoring the patient's blood pressure has not been optimally carried out by officers. Education has been carried out but the implementation has not been optimal. Pharmacological therapy has been given in accordance with applicable policies.

Conclusion

Implementation of the Minimum Service Standard for Hypertension needs to be improved from the aspect of understanding the officers regarding policies, personnel, funds, infrastructure, patient monitoring, and education. It is hoped that Air Dingin Primary Health Care will further optimize the monitoring of hypertension patients by improving the work structure of officers, increasing the commitment of officers in monitoring and allocating funds in its implementation.
