Pengalaman Perawat dalam Melaksanakan Timbang Terima Selama
Masa Krisis Kesehatan di Ruang Rawat Inap Sakura
Rumah Sakit Universitas Andalas

ABSTRAK

Krisis kesehatan pandemi *Coronavirus Disease 2019* menuntut pelayanan kesehatan untuk tetap menerapkan model keperawatan profesional seperti pelaksanaan timbang terima. Timbang terima sebagai bentuk komunikasi antar perawat di masa pandemi memiliki tantangan tersendiri dikarenakan penularan virus COVID-19. Berdasarkan hasil observasi, timbang terima merupakan bentuk pelayanan manajemen kesehatan yang paling sering ditemui. Perawat melakukan timbang terima sesuai alur dengan menggunakan APD. Penelitian ini bertujuan untuk mengeksplorasi pengalaman perawat dalam melaksanakan timbang terima selama masa krisis kesehatan. Metode penelitian yang digunakan ialah metode kualitatif dengan pendekatan fenomenologi. Partisipan dalam penelitian ini berjumlah 5 orang partisipan yang dipilih dengan menggunakan teknik *purposive sampling* sesuai kriteria inklusi. Pengumpulan data dilakukan dengan wawancara mendalam yang di rekam dan dibantu dengan pedoman wawancara serta catatan lapangan. Data di analisis dengan menggunakan metode tematik analisis Colaizzi. Hasil penelitian didapatkan empat tema yaitu protokol timbang terima selama masa krisis kesehatan, manfaat timbang terima selama masa krisis kesehatan, kendala pelaksanaan timbang terima selama masa krisis kesehatan, dan harapan terhadap pelaksanaan timbang terima saat masa krisis kesehatan. Disarankan agar pelaksanaan timbang terima tetap dijalankan di masa krisis kesehatan dengan penggunaan APD dan prosedur yang sesuai sebagaimana mestinya.

*Nurse's Experience of Hand Over Implementation During
a Health Crisis Period in Sakura's Inpatient Room
Andalas University Hospital*

ABSTRACT

The 2019-Coronavirus Disease pandemic health crisis requires health services to continue to apply professional nursing models such as the implementation of hand over. Hand over as a communication between nurses during a pandemic has its own challenges due to the transmission of the COVID-19 virus. Based on observations, hand over is the most frequently encountered of health management services. The nurse does the hand over according to the flow using PPE. This study aims to explore the experiences of nurses hand over out acceptable weigh-ins during times of health crisis. The research method used is qualitative research with a phenomenological approach. Participants in this study amounted to 5 participants who were selected using a purposive sampling technique according to the inclusion criteria. Data were collected by in-depth interviews which were recorded and assisted with interview guidelines and field notes. The data were analyzed using the thematic method of Colaizzi's analysis. The results of the study obtained four themes, namely the accept weighing protocol during the health crisis period, the benefits of weighing receive during the health crisis period, obstacles to the implementation of the accept weigh during the health crisis period, and expectations for the implementation of the accept weigh during the health crisis period. A recommend that the hand over still continue during the health crisis and use personal protect equipment when it works and appropriate procedures as appropriate.
