**ABSTRAK**

**Tujuan**

Kecamatan Koto Tangah menjadi kecamatan dengan tingkat penjangkauan kesehatan peserta didik terendah nomor dua di Kota Padang yaitu 28,4%. Tujuan penelitian ini adalah untuk mengetahui hubungan ketersediaan input dan pembinaan puskesmas dengan pelaksanaan program Usaha Kesehatan Sekolah (UKS) di Sekolah Dasar di Kec. Koto Tangah Kota Padang.

**Metode**

Desain penelitian *cross-sectional* dilakukan pada bulan Januari hingga Juli 2022 dengan variabel dependen pelaksanaan program UKS dan variabel independen ketersediaan input dan pembinaan puskesmas. Populasi adalah seluruh guru pembina UKS di SD yang ada di Kec. Koto Tangah. Jumlah sampel 35 responden secara *total sampling*. Data diolah secara univariat dan bivariat.

**Hasil**

Hasil penelitian menunjukkan bahwa 62,5% pelaksanaan program UKS terlaksana dibawah standar, 59,4% ketersediaan input tersedia dengan baik, dan 56,3% pembinaan puskesmas terlaksana dengan baik. Variabel yang berpengaruh adalah ketersediaan input sedangkan pembinaan puskesmas tidak berpengaruh terhadap pelaksanaan program UKS.

**Kesimpulan**

Terdapat hubungan yang bermakna antara ketersediaan input dengan pelaksanaan program UKS di SD di Kec. Koto Tangah Kota Padang. Untuk dapat terlaksananya program UKS diatas standar, diharapkan kepada pihak sekolah dapat menentukan dan membentuk guru pembina dan tim pelaksana UKS serta melengkapi sarana dan prasarana di ruang UKS.

**ABSTRACT**

**Objective**

Koto Tangah sub-district is the sub-district with the second lowest level of student health screening in Padang City, which is 28.4%. The Objective of this study was to determine the relationship between the availability of inputs and the guidance of the puskesmas with the implementation of the School Health Business (UKS) program in elementary schools in the district. Koto Tangah, Padang City.

**Method**

The design of the cross-sectional study was conducted from January to July 2022 with the dependent variable being the implementation of the UKS program and the independent variable being the availability of input and coaching at the puskesmas. The population is all UKS teachers in primary schools in Kec. Koto Tangah. The number of samples is 35 respondents in total sampling. The data were processed by univariate and bivariate.

**Result**

The results showed that 62.5% of the implementation of the UKS program was carried out below the standard, 59.4% of the availability of available inputs were well done, and 56.3% of the development of the puskesmas was carried out well. The influential variable is the availability of inputs, while the development of the puskesmas has no effect on the implementation of the UKS program.

**Conclusion**

There is a significant relationship between the availability of inputs and the implementation of the UKS program in elementary schools in the Kec. Koto Tangah, Padang City. To be able to carry out the UKS program above the standard, it is hoped that the school can determine and form a tutor teacher and UKS implementation team and complete the facilities and infrastructure in the UKS room.
