**xvii + 94 halaman, 23 tabel, 2 gambar, 15 lampiran**

**Tujuan**

Kunjungan ibu balita ke Posyandu selama pandemi COVID-19 menurun, mengakibatkan tidak terpantau tumbuh kembang balita. Tujuan penelitian ini untuk mengetahui faktor yang berhubungan dengan kunjungan ibu balita ke Posyandu di Nagari Sibarambang wilayah Kerja Puskesmas Paninjauan Kabupaten Solok selama pandemi COVID-19 tahun 2022.

**Metode**

Penelitian ini menggunakan pendekatan *cross sectional* dengan populasi sebanyak 231 ibu balita dan diambil sampel dengan perhitungan *lameshow*, sehingga sampelnya 75 ibu balita. Pengolahan data menggunakan analisis univariat dan bivariate, diolah menggunakan uji *chi square*.

**Hasil**

Analisis univariat menunjukkan bahwa 58,7% ibu balita memiliki kunjungan yang kurang ke Posyandu, 50,7% ibu berpengetahuan kurang, 53,3% ibu bersikap positif, 56% ibu tidak yakin, 62,7% ibu memiliki jarak rumah yang dekat, dan 56% ibu didukung oleh keluarganya. Analisis bivariat dengan CI 95% diperoleh variabel pengetahuan, sikap, keyakinan dan jarak dengan nilai *p value* = 0,000 berhubungan dengan kunjungan ibu balita ke Posyandu dan variabel dukungan keluarga dengan nilai *p value* = 0,296 tidak berhubungan dengan kunjungan ibu balita ke Posyandu.

**Kesimpulan**

Kunjungan ibu balita ke Posyandu dipengaruhi oleh faktor pengetahuan, sikap, keyakinan dan jarak. Kunjungan ibu balita tidak dipengaruhi oleh dukungan keluarga. Disarankan untuk menyediakan tempat Posyandu setiap jorongnya, sehingga tidak adanya dua Posyandu yang dijadikan satu.

**THE FACTOR RELATED TO TODDLER MOTHER VISITING TO INTEGRATED HEALTHCARE CENTER IN SIBARAMBANG VILLAGE OF THE WORKING AREA OF PANINJAUAN HEALTH CENTER DURING THE PANDEMIC COVID-19 OF 2022.**

**xvii + 94 pages, 23 tables, 2 pictures, 15 appendixes**

**Objective**

The visits Mothers of toddlers Posyandu during the COVID-19 dicidease. Its caused unable to control the growth of the toddlers. The objective of the research is to know the factor that the visit mothers of toddlers to integrated healthcare in Sibarambang Village the working area of Paninjauan Health Center Solok during the pandemic COVID-19 of 2022.

**Method**

This research used a *cross sectional* approach with the 231 population mothers of toddlers and the xample with the counting from lameshow, so that it has 75 mothers of toddlers. Data processing uses univariate and bivariate analysis process using the *chi square* test.

**Result**

Univariate analysis showed that 58,7% mothers toddler have less visited to integrated healthcare, 53,3% mothers were negative, 56% mother note sure, 63,7% mothers had a long distance from home, and 56% of mothers supported by their families. Bivariate analysis with CI obtained knowledge, attitude, belief and distance with p value = 0,000 associated with maternal visited to integrated healthcare center and family support with p value = 0,296 not associated with maternal visited to integrated healthcare center.

**Conclusion**

The visits mothers of toddlers to integrated healthcare is influenced by Knowledge, attitude, belief, and distance. The visiting of mother toddlers is not influenced by support of family. Suggested to provide a place for the integrated healthcare in every jorong, so that there are no two integrated healthcare combined into one.
