ABSTRAK

Program KB merupakan salah satu cara dalam mengendalikan angka kelahiran dengan cara menggunakan metode kontrasepsi bagi pasangan usia subur untuk menunda, mengatur dan menjarangkan kehamilan dan kelahiran. Penelitian ini bertujuan untuk mengetahui hubungan pengetahuan dan sikap pasangan usia subur dengan keikutsertaan program KB di wilayah kerja puskesmas Alai kota padang. Desain penelitian dengan *cross sectional* di Wilayah Puskesmas Alai Padang dari bulan April 2022 sampai Mei 2022. Jumlah sampel dalam penelitian ini adalah 110 orang. Teknik pengambilan sampel dengan *sistem random sampling*. Peneliti melakukan wawancara terpimpin. Analisis data secara univariat dan bivariat, menggunakan uji statistik *chi-square* ($p < 0,05$). Hasil penelitian menunjukkan 40.9% PUS di Wilayah Kerja Puskesmas Alai memiliki pengetahuan cukup mengenai KB, 86.4% PUS memiliki sikap positif mengenai KB. Hanya 69.1% PUS yang ikut sebagai peserta KB. Analisis bivariat menunjukkan terdapat hubungan yang signifikan antara pengetahuan PUS ($p = 0,001$) dan sikap PUS ($p = 0,015$) dengan keikutsertaan program KB. Terdapat hubungan yang bermakna antara pengetahuan dan sikap PUS dengan keikutsertaan KB di Wilayah Kerja Puskesmas Alai Kota Padang..

ABSTRACT

The family planning program is one way to control the birth rate by using contraceptive methods for couples of childbearing age to delay, regulate and space pregnancies and births. This study aims to determine the relationship between knowledge and attitudes of couples of childbearing age with participation in family planning programs in the work area of Alai Public Health Center, Padang City. The research design was *cross sectional* in the Alai Padang Health Center area from August 2022 to May 2022. The number of samples in this study was 110 people. Sampling technique with *random sampling system*. Researchers conducted guided interviews. Data analysis was univariate and bivariate, using *chi-square* statistical test $p < (0.05)$. The results showed that 40.9% of couples of childbearing age in the Alai Health Center had sufficient knowledge of family planning, while 86.4% of women of childbearing age had a positive attitude about family planning. Only 69.1% of couples of childbearing age participated as family planning participants. Bivariate analysis showed that there was a significant relationship between knowledge of couples of childbearing age ($p=0.001$) and attitudes of couples of childbearing age ($p=0.015$) with participation in family planning programs. There is a significant relationship between the knowledge and attitudes of couples of childbearing age with family planning participation in the work area of the Alai Public Health Center, Padang City.
