**ABSTRAK**

Dokumentasi merupakan sarana komunikasi afektif antar profesi kesehatan. Rendahnya kualitas pendokumentasian catatan terintegrasi di Indonesia meliputi tidak lengkapnya pengisian form CPPT dimana didapatkan tidak terisinya identitas pasien, tanggal dan jam visit, serta nama dan tanda-tangan PA secara lengkap, serta kurangnya kedisiplinan pengisian rekam medis oleh PPA. Karakteristik perawat merupakan faktor individu yang mempengaruhi kinerja pendokumentasian. Form tindakan perawat merupakan media komunikasi perawat dalam melakukan asuhan keperawatan berupa tanggal, waktu dan uraian kegiatan yang dilakukan. Tujuan penelitian adalah menganalisis hubungan pelaksanaan supervisi klinik model 4S dengan indikator pendokumentasian terintegrasi di RSU Universitas Riau. Penelitian ini merupakan penelitian kuantitatif dengan pendekatan cross sectional. Sampel penelitian berjumlah 33 orang dengan teknik pengambilan sampel total sampling. Instrumen penelitian menggunakan kuesioner dan lembar observasi yang sudah di validitas dan reliabilitasnya. Hasil analisis terdapat hubungan karakter supervisor (*p value* 0,002), kooperatif (*p value* 0,044), terdapat kompeten (*p value* 0,001), komunikatif supervisor (*p value* 0,000) terhadap fase persiapan supervisi. Terdapat hubungan karakter (*p value* 0,000), kooperatif (*p value* 0,008), kompeten (*p value* 0,000), komunikatif (*p value* 0,000) terhadap fase pelaksanaan supervisi. Terdapat hubungan karakter (*p value* 0,004), kooperatif (*p value* 0,005), kompeten (*p value* 0,000), komunikatif (*p value* 0,001) terhadap fase evaluasi supervisi. Terdapat hubungan fase persiapan (*p value* 0,000), fase pelaksanaan (*p value* 0,001) dan fase evaluasi (*p value* 0,000) supervisi klinik model 4S dengan CPPT. Peneliti merekomendasikan peran supervisi untuk peningkatan kompetensi dan kepatuhan perawat dalam pelaksanaan pendokumentasian keperawatan RS.

**ABSTRACT**

*Documentation is a means of affective communication between health professions. The low quality of integrated record documentation in Indonesia includes incomplete filling of the CPPT form where it is found that the patient's identity, date and time of visit are not filled, as well as the name and signature of the PA in full, and the lack of discipline in filling out medical records by the PPA. The characteristics of nurses are individual factors that affect the performance of documentation. The nurse action form is a communication medium for nurses in carrying out nursing care in the form of date, time and description of the activities carried out. The purpose of the study was to analyze the relationship between the implementation of the 4S model of clinical supervision with integrated documentation indicators at the Riau University General Hospital. This research is a quantitative research with a cross sectional approach. The research sample amounted to 33 people with a total sampling technique of sampling. The research instrument used questionnaires and observation sheets that had been validated and relied on. The results of the analysis showed that there was a relationship between supervisor character (p value 0.002), cooperative (p value 0.044), competent (p value 0.001), communicative supervisor (p value 0.000) to the supervision preparation phase. There is a character relationship (p value 0.000), cooperative (p value 0.008), competent (p value 0.000), communicative (p value 0.000) to the supervision implementation phase. There is a character relationship (p value 0.004), cooperative (p value 0.005), competent (p value 0.000), communicative (p value 0.001) to the supervision evaluation phase. There is a relationship between the preparation phase (p value 0.000), implementation phase (p value 0.001) and evaluation phase (p value 0.000) clinical supervision of the 4S model with CPPT. The researcher recommends the role of supervision to increase the competence and compliance of nurses in the implementation of hospital nursing documentation.*
