Gawat darurat maternal merupakan kondisi yang mengancam jiwa ibu dan janin. Beberapa upaya pencegahan kasus gawat darurat maternal yaitu pemeriksaan *antenatal care* (ANC) tepat waktu, sesuai standar, dan dilengkapi dengan buku *Maternal and Child Health* (MCH). Tujuan dari penelitian ini untuk menganalisis hubungan antara pemanfaatan buku MCH, kuantitas, dan kualitas ANC dengan tingkat gawat darurat maternal di RSUP Dr. M. Djamil Padang.

Metode penelitian yang digunakan *mixed method* (metode kombinasi) dengan desain *sequential explanatory*. Penelitian kuantitatif menggunakan desain *cross sectional*. Responden berjumlah 108 ibu di PONEK RSUP Dr. M. Djamil Padang periode Mei-Juli 2022, teknik pengambilan sampel secara *consecutive sampling*. Analisis data menggunakan uji *chi square*. Data kualitatif diperoleh melalui *indepth interview* dan dianalisis secara *thematic analysis*.

Hasil penelitian 43,5% responden tidak memanfaatkan buku MCH dengan efektif, 26,9% kuantitas ANC < 6 kali, 18,5% kualitas ANC tidak baik, dan 11,1% triase berwarna merah. Terdapat hubungan antara pemanfaatan buku MCH (*p-value* 0,043), kuantitas ANC (*p-value* <0,001), kualitas ANC (*p-value* 0,044) dengan tingkat gawat darurat maternal di RSUP Dr. M. Djamil Padang. Tidak semua ibu mendapat penjelasan manfaat buku MCH, sebagian besar ibu tidak membaca buku MCH, ibu memiliki persepsi buku MCH mampu mencegah kasus gawat darurat maternal. Ibu merasa puas dengan kualitas pelayanan ANC yang diterimanya.

Terdapat hubungan pemanfaatan buku MCH, kuantitas, dan kualitas ANC dengan tingkat gawat darurat maternal di RSUP Dr. M. Djamil Padang. Sebagian ibu tidak mendapatkan penjelasan dari tenaga kesehatan mengenai manfaat buku MCH. Ibu puas dengan pelayanan ANC yang diterimanya, meskipun belum mampu mendeteksi kasus gawat darurat maternal.

**Kata kunci :** Buku MCH, Kegawatdaruratan Maternal, Kualitas ANC, Kuantitas ANC

## ABSTRACT

### ANALYSIS OF RELATIONSHIP BETWEEN THE UTILIZATION OF MATERNAL AND CHILD HEALTH (MCH) HANDBOOK, QUANTITY, AND QUALITY OF ANTENATAL CARE WITH LEVEL OF MATERNAL EMERGENCY AT RSUP DR. M. DJAMIL PADANG

RENA AFRI NINGSIH

A maternal emergency is a condition that threatens the life of the mother and fetus. Efforts to prevent maternal emergency cases are antenatal care (ANC) examinations on time, according to standards, and equipped with Maternal and Child Health (MCH) handbooks. The purpose of this study was to analyze the relationship between the use of MCH handbooks, quantity, and quality of ANC with the level of maternal emergency at RSUP. Dr. M. Djamil Padang.

The research method used is mixed method (combination method) with a sequential explanatory design. Quantitative research uses a cross-sectional design. Respondents were 108 mothers in PONEK RSUP. Dr. M. Djamil Padang for May-July 2022, the sampling technique was consecutive sampling. Data analysis using chi-square test. Qualitative data were obtained through in-depth interviews and thematic analysis.

The results of the study were 43.5% of respondents did not use the MCH handbook effectively, 26.9% ANC quantity < 6 times, 18.5% ANC quality was not good, and 11.1% red triage. There is a relationship between the use of MCH handbooks (p-value 0.043), the quantity of ANC (p-value <0.001), quality of ANC (p-value 0.044) and the level of maternal emergency at Dr M. Djamil Padang. Not all mothers received an explanation of the benefits of MCH handbooks, most mothers did not read MCH handbooks, and mothers had the perception that MCH handbooks were able to prevent maternal emergency cases. Mother was satisfied with the quality of the ANC service she received.

There is a relationship between the use of MCH handbooks, quantity, and quality of ANC with the level of maternal emergency at RSUP. Dr. M. Djamil Padang. Some mothers did not get an explanation from health workers about the benefits of the MCH handbooks. Mother is satisfied with the ANC service she received, although she has not been able to detect maternal emergency cases.
