Gambaran Pengetahuan dan Sikap Kesiapsiagaan Bencana Pada Masyarakat
Pasca Simulasi Bencana Gempa Bumi di RW 12, Kel. Pasie Nan Tigo,
Kec. Koto Tengah, Kota Padang

ABSTRAK

Keberhasilan penanggulangan bencana ditentukan oleh kesiapsiagaan masyarakat. *Sendai Framework 2015-2030* menetapkan peningkatan kesiapsiagaan bencana sebagai prioritas karena lebih efektif. Masyarakat siaga bencana dinilai dari pengetahuan dan sikap yang dimiliki pasca pemberian edukasi kesiapsiagaan bencana. Tujuan penelitian adalah melihat gambaran pengetahuan dan sikap kesiapsiagaan bencana masyarakat pasca simulasi bencana gempa bumi di RW 12, Kel. Pasie Nan Tigo, Kec. Koto Tengah, Kota Padang. Jenis penelitian ini kuantitatif dengan desain deskriptif. Analisis data menggunakan analisis univariat. Sampel berjumlah 30 orang yang diambil dengan teknik *total sampling* dari masyarakat RW 12 yang pernah mengikuti simulasi. Instrumen penelitian menggunakan kuesioner yang terdiri dari 3 bagian yaitu data demografi, kuesioner pengetahuan, dan kuesioner sikap. Hasil penelitian didapatkan 86,7% responden berpengetahuan baik dan 63,3% memiliki sikap negatif. Disarankan kepada pemerintah setempat mengevaluasi secara berkala kesiapsiagaan bencana masyarakat dan memberikan dukungan terhadap KSB RW 12 dalam menjalankan program edukasi dan pelatihan siap siaga bencana.

*Description of Knowledge and Attitude of Community Disaster Preparedness
Post-Earthquake Disaster Simulation at RW 12, Kel. Pasie Nan Tigo,
Kec. Koto Tangah, Padang City*

ABSTRACT

The success of disaster management is determined by the preparedness of the community. The Sendai Framework 2015-2030 defines improving disaster preparedness as a priority because it is more effective. Disaster preparedness communities are assessed from the knowledge and attitudes they have after providing disaster preparedness education. The purpose of the study was to see a description of the knowledge and attitudes of community disaster preparedness after the earthquake disaster simulation in RW 12, Kel. Pasie Nan Tigo, Kec. Koto Tangah, Padang City. This type of research is quantitative with a descriptive design. Data analysis used univariate analysis. A sample of 30 people was taken using a total sampling technique from the community of RW 12 who had participated in the simulation. The research instrument used a questionnaire consisting of 3 parts, namely demographic data, knowledge questionnaire, and attitude questionnaire. The results showed that 86.7% of respondents had good knowledge and 63.3% had a negative attitude. It is recommended to the local government to periodically evaluate community disaster preparedness and provide support to KSB RW 12 in carrying out disaster education and training programs.
