GAMBARAN *SELF EFFICACY* KADER SIAGA BENCANA PASCA SIMULASI
GEMPA BUMI DI KELURAHAN PASIE NAN TIGO

ABSTRAK

Kader siaga bencana memiliki peran yang penting dalam fase pra bencana, tanggap darurat, dan pasca bencana. Peran tersebut dapat berjalan dengan optimal saat kader siaga bencana memiliki keyakinan yang tinggi dan merasa mampu untuk menjalankan tugasnya. Keyakinan dari kader siaga bencana dapat dilihat dari *self efficacy* yang dimiliki. Tujuan penelitian ini adalah untuk mengetahui gambaran *self efficacy* kader siaga bencana pasca simulasi gempa bumi di Kelurahan Pasie Nan Tigo. Jenis penelitian adalah deskriptif kuantitatif. Sampel penelitian ini berjumlah 92 orang yang di pilih dengan teknik total *sampling*. Instrumen yang digunakan *General Self Efficacy (GSE)*. Analisa data dengan analisa univariat. Hasil penelitian menunjukkan hampir seluruh responden (76.1%) berada pada kategori *self efficacy* yang tinggi, dengan hampir setengahnya (48.9%) berjenis kelamin laki-laki, sebagian besar (67.4%) berusia 12-26 tahun, hampir setengahnya (40.2%) berpendidikan SMA, dan hampir setengahnya (41.3%) melakukan pelatihan kebencanaan 1-2 kali. Disarankan kepada kader siaga bencana untuk meningkatkan motivasi, pengalaman dan pelatihan terkait kebencanaan.

Kata Kunci : Gempa Bumi, Kader Siaga Bencana, *Self Efficacy*

**DESCRIPTION OF THE SELF EFFICACY OF DISASTER PREPAREDNESS
CADRES POST EARTHQUAKE SIMULATION IN PASIE NAN TIGO WARD**

ABSTRACT

Disaster preparedness cadres have an important role in the pre-disaster, emergency response, and post-disaster phases. This role can run optimally when disaster preparedness cadres have high confidence and feel capable of carrying out their duties. The confidence of disaster preparedness cadres can be seen from their self-efficacy. The purpose of this study was to describe the self-efficacy of disaster preparedness cadres after an earthquake simulation in Pasie Nan Tigo Ward. This type of research is descriptive quantitative. The sample of this study amounted to 92 people who were selected by total sampling technique. The instrument used is General Self Efficacy (GSE). Data analysis with univariate analysis. The result showed that almost all respondents (76.1%) were in the category of high self-efficacy, with almost half (48.9%) being male, most (67.4%) aged 12-26 years, almost half (40.2%) having high school education, and almost half (41.3%) undertaking disaster training 1-2 times. It is recommended for disaster preparedness cadres to increase motivation, experience and training related to disasters.
