**FACTORS RELATED TO MATERNAL BEHAVIOR ABOUT HB-0 IMMUNIZATION
IN WORKING AREA PARAMAN AMPALU HEALTH CENTER GUNUNG TULEH
DISTRICT AT WEST PASAMAN REGENCY 2016**

xi+66 pages,19 tables,2 figures,11 appendix

Objective

HB-0 immunization to infants to protect against hepatitis B virus that can damage the liver. HB-0 immunization scope at the health center in 2015 ParamanAmpalu still low (73.3%). The purpose of this study to determine the factors associated with maternal behavior of HB-0 immunization of infants in ParamanAmpalu Health Center GunungTuleh District at West Pasaman Regency.

Method

This research was done on January-June 2016. The researchdesign is cross sectional study. Population in this research were 278 respondents, with a sample of 72 respondents having a babies. The sampling technique is stratified random sampling. Data were analysis using chi-square test.

Result

The results showed HB-0 immunization to infants (83.3%). Results of bivariate analysis showed that factors related to the mother's behavior on immunization HB-0 is the mother's age (p-value = 0.003), mother's attitude (p-value = 0.003), mother's education (p-value = 0.004), support of her husband (p-value = 0.001), support health workers (p-value = 0.001).

Conclusion

There was an increase in HB-0 immunization scope in infants from (73.3%) become (83.3%). Results showed that relationship between mother's age, mother's attitude, mother's education, husband's support and support of health worker. Expected to the midwives to cooperate across sectors for give health promotion to community so asgives babies HB-0 immunization.
