**ANALISIS RENDAHNYA CAKUPAN D/S BALITA DI POSYANDU  
KENAGARIAN GANTUNG CIRI WILAYAH KERJA PUSKESMAS  
SELAYO KABUPATEN SOLOK TAHUN 2016**

xii + 55 halaman + 11 tabel, 2 gambar, 11 lampiran

**ABSTRAK**

**Tujuan Penelitian**

Cakupan D/S Puskesmas Selayo masih rendah yaitu 64,1% dan belum mencapai target pemerintah tahun 2014 yaitu 85%. Penelitian ini bertujuan untuk mendapatkan informasi penyebab rendahnya cakupan D/S balita di puskesmas Selayo

**Metode**

Metode penelitian kualitatif, dengan menggunakan pendekatan sistem. Informan penelitian 11 orang, dengan teknik penentuan informan secara *purposive sampling*. Pengumpulan data dengan wawancara mendalam, observasi, telaah dokumen dan FGD. Pengolahan data terdiri dari mereduksi data, menyajikan data dan verifikasi/kesimpulan. Analisis data dengan *content analysis* dan divalidasi menggunakan triangulasi sumber dan metode.

**Hasil**

Hasil penelitian didapatkan tenaga pelaksana posyandu sudah terpenuhi, sumber dana untuk pelaksanaan posyandu telah tersedia dari APBD dan BOK, tetapi belum mencukupi. Sarana dan prasarana posyandu seperti tempat dan dacin masih kurang. Perencanaan posyandu sudah dilakukan dengan membuat POA dan RKO. Pelaksanaan posyandu sudah menjalankan sistem 5 meja namun belum tertib, dalam kegiatan posyandu dilakukan juga pengawasan.

**Kesimpulan**

Secara umum kegiatan posyandu sudah dapat berjalan namun belum optimal, sehingga cakupan D/S belum mencapai target. Disarankan perlunya peningkatan sarana dan prasarana posyandu, sumber dana tambahan dalam pelaksanaan kegiatan, dan meningkatkan kualitas kader posyandu.

**ANALYSIS OF LOW COVERAGE D/S CHILDREN IN NEIGHBORHOOD  
GANTUNG CIRI VILLAGE HEALTH CENTER WORK AREA PUBLIC  
HEALTH SELAYO DISTRICT SOLOK YEAR 2016**

xi + 58 pages + 11 tables, 2 pictures, 11 appendices

**ABSTRACT**

**Objectives**

Coverage D/S in Public Health Center Selayo still low at 64,1% and does not reach the government's target by 2014 is at 85%. This study aimed to obtain information on the causes of low coverage D/S toddlers in Public Health Center Selayo.

**Method**

The research used a qualitative methods, using a systems approach. Informants of the research are 11 peoples, with the technique of determining the informants purposively sampling. Collecting data with in-depth interviews, observation, document review and a focus group. Processing data consists of reducing, present and verification/conclusions. Data were analyzed using content analysis and validated using triangulation of sources and methods.

**Result**

The result showed neighborhood health center's executive power has been fulfilled, sources of funds for the implementation of neighborhood health center has been provided from the APBD and BOK, but not sufficient. Neighborhood health center's infrastructure like the place and dacin is still lacking. Neighborhood health center planning has been done by making POA and RKO. The implementation of neighborhood health center use 5 table system, but has not been orderly. neighborhood health center activities performed well in control.

**Conclusion**

Generally, activity of neighborhood health center is able to walk, but not optimal., so D/S not reached the traget. Suggested the need to upgrade infrastructure and facilities neighborhood health center, additional resources in the implementation of activities, and improve the quality of neighborhood health center's cadres.
