**ABSTRACT**

This thesis aimed to give description and analysis on the research entitled “The Mechanisme of Capitation Fund Distribution of health workers Outpatient Services in Remote Areas of National Health Insurance Program”. This research used a qualitative approach, with a method of collecting the data through observations, interviews and documentations with the number of informant 7 person. The unit of the analysis is an institute which is located in a Mappadegat Public Health Center Mentawai Island Regency for 3 months (June 1<sup>st</sup> until September 3<sup>rd</sup> 2015)

The result of this research revealed that the policy of the socialization from the center region to states is not well coordinated, the planning of the decision on the PBI APBN participant pointed to Kepmensos 146 and PBI APBD pointed to the Governor Ordinance No. 50 2014 which is estimated on RKA- SKPD and directly paid to BPJS Health and then they provide a reimbursement of capitation fund for Mapaddegat Public Health Center start from May 2014 until July 2015. The provided capitation fund is not in accordance with the rules, and the reception is not recorded in DPPKAD as legitimate local revenue. in 2014 The fund of capitation it is become the audit finding BPK. The fund of capitation received by health workers is influenced by the number of workforce point that gained every month. The acceptance of the capitation fund of health worker such as doctor is way bigger in the term of acceptance compared to the acceptance number of midwife and nurse, while the duty of midwife and nurse way harder than the doctor’s duty in a daily basis.

Furthermore, the acceptance of capitation on honorary staff/ contract / PTT are much greater than the power of civil servants who already has a service of life more than 10 years , even the number of civil servants that received capitation funds have an equal power with temporary employees who have worked only for a year. In the terms of management, the expenditure and capitation fund reporting are already process with an appropriate rule, although there are still some weaknesses that need to be improved. Meanwhile, for the quality of service of the health workers in accordance with standard operational procedures of the health services but it is always need to be improved.

This thesis has been maintained in front of Hearing Examiner and the abstract has been approved on 13 April 2016 by Examiner Lecturer:
