Hubungan Pengetahuan dan Sikap Perawat dengan Pelaksanaan Peran Perawat  
dalam Proses *Informed Consent* di RSUD dr. Rasidin Padang

**ABSTRAK**

Perawat sebagai tenaga medis memiliki beberapa peran yang harus dilaksanakan dalam proses *informed consent*. Hal ini menjadi aspek penting dari pelayanan keperawatan karena pengetahuan awal mengenai *informed consent* merupakan salah satu penentuan aspek mutu pelayanan dalam proses keperawatan. Penelitian ini bertujuan untuk mengetahui hubungan pengetahuan dan sikap perawat dengan pelaksanaan peran perawat dalam proses *informed consent* di RSUD dr. Rasidin Padang. Jenis penelitian ini ialah kuantitatif dan desain penelitian adalah analitik dengan pendekatan *cross sectional* dimana jumlah sampel adalah 82 orang perawat. Pengambilan sampel dilakukan dengan teknik *proportional stratified random sampling*. Pengumpulan data melalui pengisian lembar kuesioner tentang pengetahuan, sikap dan pelaksanaan peran perawat dalam proses *informed consent*. Analisis data menggunakan uji *Chi-Square*. Hasil penelitian menunjukkan bahwa kurang dari separuh perawat (46,3%) memiliki pengetahuan yang baik, lebih dari separuh perawat (53,7%) memiliki sikap positif dan lebih dari separuh perawat (51,2%) melakukan pelaksanaan peran dalam kategori tidak optimal dalam proses *informed consent*. Hasil analisa statistik didapatkan hubungan yang bermakna antara pengetahuan ( $p = 0,016$ ) dan sikap ( $p = 0,044$ ) perawat dengan pelaksanaan peran perawat dalam proses *informed consent* di RSUD dr. Rasidin Padang. Diharapkan perawat dapat meningkatkan pengetahuannya tentang *informed consent* dan menunjukkan sikap positif agar lebih optimalnya pelaksanaan peran dalam proses *informed consent*.

Kata kunci : *informed consent*, pengetahuan, peran perawat, sikap

*Knowledge and Attitude of Nurses relationship with Implementation Role of Nurses in the Informed Consent Process in RSUD dr. Rasidin Padang*

### ABSTRACT

Nurses as a medic had several roles that must be carried out in the process of informed consent. This is an important aspect of nursing services for the early knowledge of the informed consent is one of the determining aspects of service quality in the nursing process. This study aims to determine the relationship of knowledge and attitude of nurses with the implementation of the nurse's role in the process of informed consent in dr. Rasidin Padang. This type of research was quantitative and research design was cross sectional analytic approach in which the number of samples is 82 nurses. Sampling was done by stratified random sampling technique. The collection of data by filling the questionnaire on knowledge, attitude and implementation of the nurse's role in the process of informed consent. Data analysis using Chi-Square test. The results showed that less than half of nurses (46.3%) had a good knowledge, more than half of the caregivers (53.7%) have a positive attitude and more than half of nurses (51.2%) to exercise the role of the category of not optimal in the process of informed consent. Statistical analysis found a significant relationship between knowledge ( $p = 0.016$ ) and attitude ( $p = 0.044$ ) of nurses with the implementation of the nurse's role in the process of informed consent in RSUD dr. Rasidin Padang. Expected nurses can increase their knowledge about informed consent and showed a positive attitude to be more optimal implementation role in the informed consent process.
