Faktor-faktor yang berhubungan dengan kualitas dokumentasi asuhan keperawatan di Ruang Rawat Inap Rumah Sakit Islam Ibnu Sina Padang Tahun 2016

vii + 121 halaman + 11 tabel + 12 lampiran

ABSTRAK

Mutu asuhan keperawatan dapat tergambar dari dokumentasi proses keperawatan. Dokumentasi asuhan keperawatan selain kelengkapan juga penting menilai kualitas dari dokumentasi asuhan keperawatan yang telah dilakukan oleh perawat. Hasil evaluasi dokumentasi asuhan keperawatan di RSI Ibnu Sina Padang Tahun 2015 yaitu 68,6% masih belum mencapai standar yang diharapkan Depkes (2005) yaitu 75% dari rata-rata pelaksanaan komponen asuhan keperawatan. Penelitian ini bertujuan untuk mengetahui faktor-faktor yang berhubungan dengan kualitas dokumentasi asuhan keperawatan. Jenis penelitian ini adalah analitik dengan pendekatan *cross sectional study*. Jumlah sampel 45 perawat pelaksana di Ruang Rawat Inap dengan pengambilan sampel menggunakan teknik *proportional random sampling*. Analisa data bivariat dengan *chi-square* dan multivariat dengan *regresi logistic*. Hasil penelitian menunjukkan perawat usia dewasa muda (84,4%), perawat dengan lama kerja tergolong lama (55,6%), motivasi perawat baik terhadap kualitas dokumentasi asuhan keperawatan (53,3%), supervisi perawat baik terhadap kualitas dokumentasi asuhan keperawatan (55,6%), imbalan perawat baik terhadap kualitas dokumentasi asuhan keperawatan (57,8%), dan kualitas dokumentasi asuhan keperawatan yang tidak baik (53,3%). Tidak ada hubungan yang bermakna antara umur dan lama kerja dengan kualitas dokumentasi asuhan keperawatan. Ada hubungan yang bermakna antara motivasi, supervisi dan imbalan dengan kualitas dokumentasi asuhan keperawatan. Supervisi merupakan faktor dominan dalam kualitas dokumentasi asuhan keperawatan. Disarankan kepada manajer rumah sakit melakukan evaluasi format dokumentasi dengan metode *checklist*, melakukan sosialisasi petunjuk teknik serta membuat kebijakan terkait *reward* dan *punishment* dalam pelaksanaan dokumentasi asuhan keperawatan.

Kata kunci : asuhan keperawatan, dokumentasi, kinerja

Factors related to the quality of nursing care documentation in patient Ibnu Sina Padang Islam Hospital 2016

vii + 121 pages + 11 tables + 12 appendixs

ABSTRACT

Quality nursing care can be imaged on the documentation of the nursing process. Documentation of nursing care is also important in addition to the completeness of judging the quality of nursing care documentation that has been done by nurses. The results of the evaluation of nursing care documentation in RSI Ibnu Sina Padang in 2015 that is 68.6% still have not reached the expected standard Department of Health (2005) which is 75% of the average nursing care component implementation. This study aims to determine the factors associated with the quality of nursing care documentation. This type of research is analytic with cross sectional study. Total sample of 45 nurses in patient wards with sampling using proportional random sampling. Bivariate data analysis with chi-square and multivariate logistic regression. The results showed nurses young adulthood (84.4%), nurses with relatively long duration of action (55.6%), nurse motivation both on the quality of nursing care documentation (53.3%), good nurse supervision of the quality of nursing care documentation (55.6%), in exchange for good nurses on the quality of nursing care documentation (57.8%), and the quality of nursing care documentation was not good (53.3%). There was not significant relationship between age and length of employment with the quality of nursing care documentation. There was a significant relationship between motivation, supervision and rewards the quality of nursing care documentation. Supervision is a dominant factor in the quality of nursing care documentation. Suggested to hospital managers to evaluate the documentation format with checklist method, technique instructions to socialize and make related policy of reward and punishment in the implementation of nursing care documentation.
