**Memahami Stigma Diantara Penderita HIV-AIDS Di Sumatera Barat
Melalui *Constructivist Grounded Theory***

Vii+ 89 Hal + 3 Tabel + 11 Lampiran + 1 Gambar

ABSTRAK

HIV-AIDS menimbulkan efek psikologis bagi para penderita atau ODHA. HIV-AIDS yang dialami seseorang menimbulkan banyak konsekuensi psikologis. Stigma berkembang melalui internalisasi oleh para ODHA dengan persepsi negatif tentang diri mereka sendiri dan bagaimana mereka menempatkan diri dalam perspektif atau pandangan negative oleh orang lain terhadap mereka. Tujuan penelitian ini adalah untuk memahami bagaimana stigma dan stigmatisasi diantara penderita HIV-AIDS dalam kehidupan sehari-hari mereka. Desain penelitian adalah kualitatif dengan Charmaz *Constructivist Grounded Theory*. Pengumpulan data dilakukan dengan wawancara semi struktur, review dokumen dan observasi pada 15 partisipan di Rumah Sakit Ahmad Muchtar Bukittinggi. Metode analisis data menggunakan metode Paille. Hasil penelitian ditemukan 5 kategori Stigma pasien HIV-AIDS yaitu: (1) denial, (2) ketakutan, (3) isolasi, (4) harga diri, (5) support system. Untuk penelitian selanjutnya diharapkan dapat dilakukan penelitian mengenai memahami stigma keluarga dan masyarakat pada penderita HIV-AIDS di sumatera barat menggunakan pendekatan *Constructivist Grounded theory*.
