**Hubungan Karakteristik Dan Pengetahuan Perawat Dengan Pencegahan
Healthcare Assosited Infections Di Instalasi Rawat Inap RS Dr. Reksodiwiryopadang**

xvi + 93hal + 11 tabel + 4 lampiran

Abstrak

Perawat pelaksana merupakan salah satu pemberi pelayanan keperawatan di rumah sakit berada 24 jam dengan pasien, dituntut agar dapat memberikan pelayanan keperawatan yang mengutamakan pencegahan *healthcare associated infections* (HAI). Pencegahan HAI masih rendah (91%) di RS. Dr. Reksodiwiryopadang. Tujuan penelitian ini adalah mengetahui hubungan antara karakteristik dan pengetahuan perawat dengan pencegahan HAI di Instalasi Rawat Inap RS Dr. Reksodiwiryopadang tahun 2016. Penelitian ini menggunakan pendekatan kuantitatif dengan desain *cross sectional study*. Populasi seluruh perawat pelaksana, dengan jumlah sampel 89 orang di Instalasi Rawat Inap. Instrumen yang digunakan untuk pengumpulan data kuisi dan observasi. Analisis data dengan uji *Chi square*. Hasil penelitian menunjukkan perawat dewasa melaksanakan pencegahan HAI, perawat berjenis kelamin laki-laki melaksanakan pencegahan HAI, tingkat pendidikan vokasi melaksanakan pencegahan HAI, perawat senior melaksanakan pencegahan HAI dan perawat berpengetahuan baik yang melaksanakan pencegahan HAI. Diharapkan lebih meningkatkan kegiatan supervisi struktur keruangan rawat inap perawat pelaksana tidak lalai dalam pencegahan HAI.

The Relationship Of Characteristics And Knowledge Of Nurses In Preventing Healthcare Associated Infections In The Inpatient Unit At Dr. Reksodiwiry Hospital Padang

xvi + 93pages + 11tables+ 4 appendixes

Abstrack

Nurse, one of nursing care providers in hospital and 24 hours with patients, required to provide nursing care and nursing services that focus on preventing HAI. HAI prevention data is still poor at the RS. Dr. Reksodiwiry Hospital Padang (91%).The purpose of this study was to determine the relationship between the characteristics and knowledge of nurses with HAI prevention in Inpatient Unit at the Dr. Reksodiwiry Hospital Padang in 2016. The study used quantitative approach with cross sectional study design. The population was all of nurse in Inpatient Unit with 89 people for sample. Data were analyzed by Chi Square test.The results of the study were no correlation between age, gender, education level, length of work, and knowledge with the prevention of HAI. It is expected to improve the supervisory activities to the inpatient unit for further so that nurses are not negligent in preventing HAI.

Keywords : Characteristics, knowledge, HAI prevention
