Hubungan Faktor Perilaku dengan Pelaksanaan Langkah-langkah *Hand Hygiene*
Perawat di Ruang Rawat Inap RSUD dr. Rasidin Padang Tahun 2016

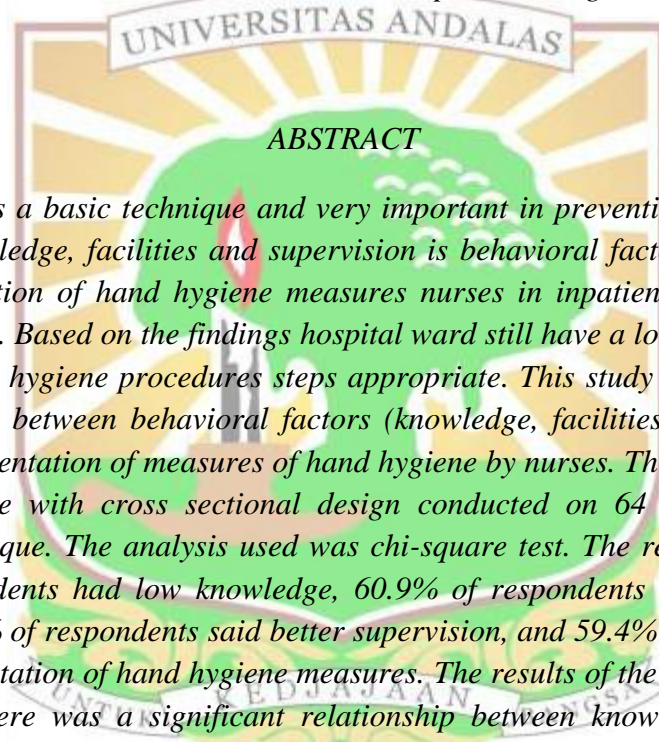

Hand hygiene merupakan teknik dasar yang paling penting dalam pencegahan dan pengontrolan infeksi. Pengetahuan, fasilitas dan supervisi merupakan faktor perilaku yang dapat mempengaruhi pelaksanaan langkah-langkah *hand hygiene* perawat. Berdasarkan temuan di ruang rawat inap RSUD dr. Rasidin Padang masih banyak perawat yang tidak melakukan langkah-langkah *hand hygiene* sesuai prosedur. Penelitian ini bertujuan untuk melihat hubungan antara faktor perilaku (pengetahuan, failitas dan supervisi) dengan pelaksanaan langkah-langkah *hand hygiene* perawat. Jenis penelitian ini adalah kuantitatif dengan desain *cross sectional* yang dilakukan pada 64 orang perawat pelaksana dengan teknik *total sampling*. Analisis yang digunakan adalah uji *chi-square*. Hasil penelitian menunjukkan bahwa 50% perawat memiliki pengetahuan rendah, 68,8% perawat menyatakan fasilitas tidak lengkap, 51,6% perawat menyatakan supervisi baik dan 59,4% perawat tidak patuh dalam pelaksanaan langkah-langkah *hand hygiene*. Hasil analisis bivariat menunjukkan bahwa ada hubungan yang bermakna antara pengetahuan ($p\ value = 0,000$), fasilitas ($p\ value = 0,000$), supervisi ($p\ value = 0,000$) dengan pelaksanaan langkah-langkah *hand hygiene* perawat. Diharapkan Rumah sakit mengadakan pelatihan untuk meningkatkan pengetahuan perawat terkait pelaksanaan langkah-langkah *hand hygiene*, memperbaiki dan melengkapi fasilitas *hand hygiene* serta memaksimalkan supervisi terkait pelaksanaan langkah-langkah *hand hygiene*.

Kata kunci : fasilitas, *hand hygiene*, pengetahuan, supervisi

Relationship Between Behavioral Factor With Implementation of Hand Hygiene by Nurses In RSUD dr. Rasidin Hospital Padang 2016

Hand hygiene is a basic technique and very important in prevention and controlling infection. Knowledge, facilities and supervision is behavioral factor that may affect the implementation of hand hygiene measures nurses in inpatient ward RSUD dr. Rasidin Padang. Based on the findings hospital ward still have a lot of nurses who do not follow hand hygiene procedures steps appropriate. This study aimed to examine the relationship between behavioral factors (knowledge, facilities and supervision) with the implementation of measures of hand hygiene by nurses. This type of research was quantitative with cross sectional design conducted on 64 nurses with total sampling technique. The analysis used was chi-square test. The results showed that 50% of respondents had low knowledge, 60.9% of respondents expressed enough facilities, 51.6% of respondents said better supervision, and 59.4% of respondents do not in implementation of hand hygiene measures. The results of the bivariate analysis showed that there was a significant relationship between knowledge (p value = 0.000), facilities (p value = 0.000), supervision (p value = 0.000) with the implementation of hand hygiene measures. The hospital was expected to improve the training of nurses knowledge related to the implementation of measures of hand hygiene, improve and equip facilities and to maximize hand hygiene supervision related to the implementation of hand hygiene measures.

Keywords : facilities, hand hygiene, knowledge, supervision
