

CHAPTER VI

CONCLUSION and SUGGESTION

6.1 Conclusion

The primary objective of the thesis was to undertake an analysis of language and environment. The aim to determine and analyse eco lexicon and metaphor in the novella the old man and the sea. Then to analyse sociology and ideology through the novel. The analysis of the research results provided green speak in surrounding, in this case is sea life whether due to physical even sociological environment. The interrelationship among creature and the environment clearly discussed in this work. in an eco-discourse analysis. These are the inter-relations, the intra-relations and the extra-relations. Intra-relations are relations within the individuality. Inter-relations are between individuality and other individualities of the same kind or species. Extra-relations are relations between individuality and other individualities of other kinds or species. Therefore, it is clear that, Eco-Critical Discourse Analysis texts or documents will be always related to those three types of relations.

In addition, biodiversity in sea life obviously describes through the data. the Additionally, as regards the Spanish and Latin as diversity has also contributed to maintenance of the language through this novella.

6.2 Suggestion

There are two possible problem through this thesis. The first problem arises from lexicon through physical environment for instance, flora, fauna, topography, mineral and also marine life house holds. A fact can be explained by applying word classifier such as noun, verb, adjective, the second problem is socio cultural environment arises through human interaction toward nature, people and their environment. Both problems are able to be overcome through an ecolinguistic approach.

Finally, this thesis contains starting points for language and environment as ecolinguistic studies as I have done. It would be fruitful, if one in analyzing this work is completed with micro analysis. The more thinkers and resources are put to work on solving the various problematic relationship between language and environment the more likely it is that such problems will eventually be solved. Thus, we as one of creature in this world should be aware and care towards our environment. In case, it is one of our oppurtunity to learn about life science even various problems must be overcome in order to save and protect our world to become as a green world.
