**FAKTOR-FAKTOR YANG BERHUBUNGAN DENGAN KUNJUNGAN LANSIA KE POSYANDU LANSIA DI WILAYAH KERJA PUSKESMAS BUNGUS TELUK KABUNG PADANG TAHUN 2016**

xiv + 71 halaman, 20 tabel, 2 gambar, 8 lampiran

**ABSTRAK**

**Tujuan**

Rendahnya cakupan kunjungan lansia ke posyandu lansia 37,2%. Penelitian ini bertujuan untuk mengetahui faktor-faktor yang berhubungan dengan kunjungan lansia ke posyandu lansia di wilayah kerja Puskesmas Bungus Teluk Kabung Padang Tahun 2016.

**Metode**

Penelitian ini merupakan penelitian observasional dengan desain *cross sectional*. Penelitian dilakukan dari bulan September sampai Oktober 2016 dengan jumlah sample 86 responden. Cara pengambilan sampel menggunakan metode *proportional random sampling*. Pengumpulan data dilakukan melalui wawancara dengan kuesioner. Data diolah dengan komputer dan dianalisis dengan uji statistik *Chi-Square* dengan derajat kepercayaan 95% ( $\alpha=0,05$ ).

**Hasil**

Hasil penelitian menunjukkan bahwa terdapat hubungan bermakna antara pengetahuan ( $p=0,010$ ), sikap ( $p=0,002$ ), dan dukungan keluarga ( $p=0,010$ ) dengan kunjungan lansia ke posyandu lansia. Tidak terdapat hubungan bermakna antara pendidikan ( $p=0,267$ ), dukungan petugas kesehatan ( $p=0,313$ ), dan jarak ( $p=1,000$ ) terhadap kunjungan lansia ke posyandu lansia.

**Kesimpulan**

Terdapat hubungan antara pengetahuan, sikap, dan dukungan keluarga dengan kunjungan lansia ke posyandu lansia di wilayah kerja Puskesmas Bungus Teluk Kabung Padang Tahun 2016. Disarankan pihak puskesmas dapat mengikutsertakan peran tokoh masyarakat untuk meningkatkan sikap positif responden agar responden lebih termotivasi untuk mengikuti kegiatan posyandu lansia secara rutin.

**SEVERAL FACTORS RELATED TO THE VISITATION OF ELDERLY TO THE INTEGRATED HEALTH SERVICE CENTER FOR ELDERLY IN THE WORKING AREA OF BUNGUS TELUK KABUNG PUBLIC HEALTH CENTER IN PADANG IN 2016**

xiv + 71 pages, 20 tables, 2 pictures, 8 attachments

**ABSTRACT**

**Objective**

The percentage of elderly visits to the integrated health service center is 37,2% which was so low. This study aimed to identify several factors that deal with the elderly visiting the integrated health service center for elderly in the working area of Bungus Teluk Kabung Padang public health center in 2016.

**Methods**

This study was an observational one with cross sectional design, conducted in September-October 2016 and took 86 respondents as the sample. The sampling method uses proportional random sampling. The data was collected through interview by using questionnaire. It was processed with computer and analyzed by Chi Square with 95% ( $\alpha=0,05$ ) confidence interval.

**Results**

The results have showed that there was a significant relationship between knowledge ( $p=0,010$ ), attitude ( $p=0,002$ ), and families' support ( $p=0,010$ ) with the elderly to the integrated health service center for elderly. There have been no significant relationships between education ( $p=0,267$ ), support of health workers ( $p=0,313$ ), and the distance ( $p=1,000$ ) of elderly visit to the elderly integrated health service center.

**Conclusions**

There are relationships between knowledge, attitude, and families' support for the elderly to visit the integrated health service center for elderly in the working area of Bungus Teluk Kabung Padang public health center in 2016. It is suggested that public health center of Bungus Teluk Kabung should encourage the participation of social leaders to improve the positive attitude of the elderly respondents so that they are motivated to follow the integrated health service center for elderly routinely.
