# HUBUNGAN PENGAWASAN DENGAN KEPATUHAN DOKTER GIGI DI POLI GIGI PUSKESMAS KABUPATEN MERANGIN DALAM PENERAPAN PRINSIP KEWASPADAAN STANDAR

Oleh : Anisa Nadhitya Marliani

## ABSTRAK

**Latar Belakang :** Dokter gigi memiliki risiko yang tinggi terhadap infeksi yang berbahaya yang disebabkan oleh bakteri dan virus sehingga diperlukan pencegahan dan pengendalian infeksi silang untuk memastikan perlindungan bagi setiap orang terhadap paparan infeksi yang diterima pada saat menerima pelayanan kesehatan

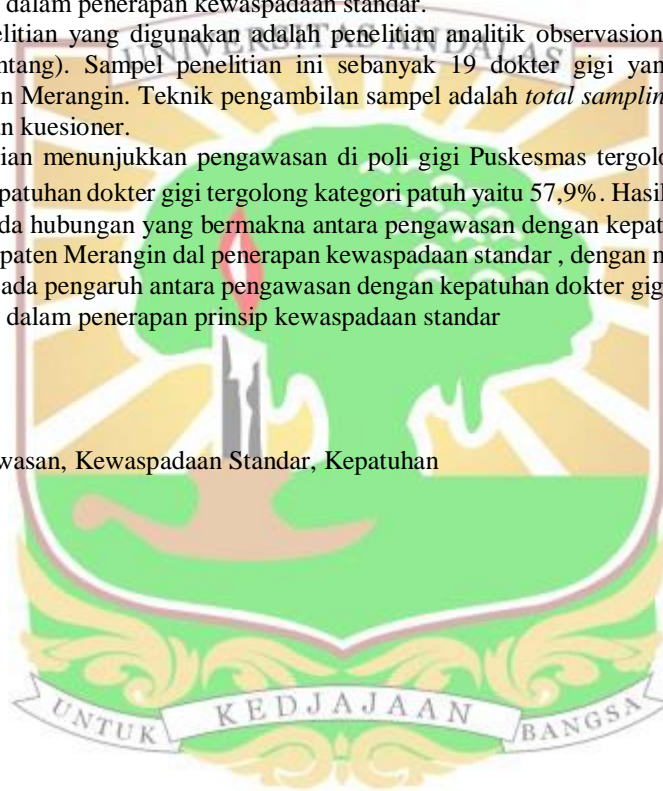

**Tujuan :** Untuk mengetahui hubungan pengawasan dengan kepatuhan dokter gigi di poli gigi puskesmas Kabupaten Merangin dalam penerapan kewaspadaan standar.

**Metode :** Jenis penelitian yang digunakan adalah penelitian analitik observasional dengan desain *cross sectional* (potong lintang). Sampel penelitian ini sebanyak 19 dokter gigi yang bekerja di poli gigi Puskesmas Kabupaten Merangin. Teknik pengambilan sampel adalah *total sampling* dengan pengumpulan data melalui pengisian kuesioner.

**Hasil :** Hasil penelitian menunjukkan pengawasan di poli gigi Puskesmas tergolong kategori baik yaitu 57,9% dan tingkat kepatuhan dokter gigi tergolong kategori patuh yaitu 57,9%. Hasil uji statistik Chi-Square menunjukkan tidak ada hubungan yang bermakna antara pengawasan dengan kepatuhan dokter gigi di poli gigi puskesmas Kabupaten Merangin dalam penerapan kewaspadaan standar, dengan nilai  $p = 0,181$  ( $p > 0,05$ )

**Kesimpulan :** Tidak ada pengaruh antara pengawasan dengan kepatuhan dokter gigi di poli gigi puskesmas Kabupaten Merangin dalam penerapan prinsip kewaspadaan standar

**Kata Kunci :** Pengawasan, Kewaspadaan Standar, Kepatuhan

**RELATIONSHIP OF SUPERVISION AND COMPLIANCE OF DENTISTS  
IN THE DENTAL CLINIC OF THE MERANGIN REGENCY  
HEALTH CENTER IN THE APPLICATION OF  
PRINCIPLE OF STANDARD PRECAUTIONS**

By: Anisa Nadhitya Marliani

**ABSTRACT**

**Background:** Dentists have a high risk of dangerous infections caused by bacteria and viruses so that cross-infection prevention and control is needed to ensure protection for everyone against exposure to infections received when receiving health services.

**Objective:** This study aimed to determine the relationship between supervision and compliance of dentists in the dental clinic of the Merangin Regency health center in implementing standard precautions.

**Methods:** The type of research used is observational analytic research with a cross sectional design. The sample of this study were 19 dentists who worked in the dental clinic of the Merangin Regency Health Center. The sampling technique was total sampling with data collection through filling out a questionnaire.

**Results:** The results showed that supervision at the dental clinic was classified as a good category, that were 57.9% and the level of compliance of dentists was classified as an obedient category, that were 57,9%. The results of the Chi-Square statistical test showed that there was no significant relationship between supervision and compliance of dentists in the dental clinic of the Merangin Regency health center in the application of standard precautions, with a p value = 0.181 ( $p > 0.05$ ).

**Conclusion:** There is no influence between supervision and compliance of dentists in the dental clinic of the Merangin Regency health center in the application of standard precautions.

**Keywords:** Supervision, Standard Precautions, Compliance
