THE EFFECT OF WET CUPPER THERAPY ON CHANGES IN BLOOD PRESSURE AND COMFORT IN HYPERTENSION PATIENTS IN JAMBI CITY

x + 103 Pages + 10 Table + 12 Attachment

ABSTRACT

Hypertension patients with disturbances on the physical part of the headache, neck stiffness, and the psychospiritual part of anxiety and restlessness in the category of discomfort. One of the non-pharmacological treatments that can treat hypertension is complementary therapy to wet cupping therapy.. The purpose of this study was to determine the effect of wet cupping therapy on changes in blood pressure and quality of comfort in hypertensive patients in the city of Jambi. The research design is a Quasi Experiment Design, two group pre and post test designs. The number of samples in the study were 34 respondents, 17 intervention groups and 17 control groups. The results of the study showed the effect of wet cupping therapy on systolic blood pressure p value (0.000) < (0.05) and diastolic p value (0.000) < (0.05) and the effect of wet cupping therapy on comfort p value (0.000) < (0.05). The conclusion is that wet cupping therapy is a non-pharmacological therapy that has an effect on reducing blood pressure and increasing comfort in hypertension.
