**FAKTOR YANG BERHUBUNGAN DENGAN PERSEPSI MASYARAKAT TERHADAP VAKSINASI *BOOSTER* COVID-19 DI KOTA PADANG TAHUN 2023**

xiii + 97 halaman, 27 tabel, 3 gambar, 8 lampiran

**ABSTRAK**

**Tujuan Penelitian**

Pelaksanaan vaksinasi *Booster* Covid-19 di Kota Padang baru mencapai 26,7% per Desember 2022 yang berarti masih jauh dari target. Dari hasil survei peneliti didapatkan sebesar 55,8% memiliki persepsi negatif terhadap manfaat vaksinasi *Booster* Covid-19. Penelitian ini bertujuan untuk mengetahui faktor yang berhubungan dengan persepsi masyarakat terhadap vaksinasi *Booster* Covid-19.

**Metode**

Desain penelitian *cross sectional* yang dilakukan di Puskesmas Andalas, Ambacang, dan Air Tawar Kota Padang pada bulan Januari-Juni 2023. Populasi penelitian ini adalah masyarakat yang terdaftar menjadi sasaran vaksinasi *Booster* Covid-19 dengan jumlah sampel 106 responden. Teknik pengambilan sampel dengan *proportional random sampling*. Analisis data univariat, bivariat, dan multivariat.

**Hasil**

Hasil penelitian diperoleh masyarakat memiliki persepsi baik terhadap vaksinasi *Booster* Covid-19. Terdapat hubungan antara umur (*p-value* 0.000), jenis kelamin (*p-value* 0.000), status pekerjaan (*p-value* 0.000), tingkat pengetahuan (0.000), dan sikap (*p-value* 0.000). Variabel yang dominan berhubungan adalah sikap (*p value* 0.001).

**Kesimpulan**

Variabel sikap paling dominan berhubungan dengan persepsi masyarakat terhadap vaksinasi *Booster* Covid-19. Diharapkan masyarakat di Kota Padang lebih menggali kembali informasi terkait vaksinasi booster Covid-19 di berbagai media dan mengvalidasi informasi tersebut kepada pihak yang dipercaya seperti tenaga kesehatan.

**ABSTRACT**

**Tujuan Penelitian**

The implementation of the Covid-19 *Booster* vaccination in Padang City has only reached 26.7% as of December 2022, which means it is still far from the target. From the results of the research survey, it was found that 55.8% had a negative perception of the benefits of the Covid-19 *Booster* vaccination. This study aims to determine factors related to public perception of the Covid-19 *Booster* vaccination.

**Metode**

The design of the cross-sectional study was conducted at the Andalas, Ambacang, and Air Tawar Health Centers in Padang City in January-June 2023. The population of this study was people who were registered as targets for the Covid-19 *Booster* vaccination with a sample size of 106 respondents. Sampling technique with proportional random sampling. Univariate, bivariate, and multivariate data analysis.

**Hasil**

The results of the study showed that the public had a good perception of the Covid-19 *Booster* vaccination. There is a relationship between age (p-value 0.000), gender (p-value 0.000), employment status (p-value 0.000), level of knowledge (0.000), and attitude (p-value 0.000). The dominant variable related is attitude (p value 0.001).

**Kesimpulan**

The most dominant attitude variable relates to people's perceptions of the Covid-19 *Booster* vaccination. It is recommended that the people of Padang City will dig up more information regarding the Covid-19 booster vaccination in various media and validate this information with trusted parties such as health workers.
