

V. CONCLUSION AND SUGGESTION

5.1 Conclusion

Based on the research above it can be concluded that :

1. The growth response of singgalang cabbage was different between each light-controlled environment.
2. Plants grown under monocromatic red and blue LED did not show better growth response were compare to mixed blue-red LEDs especialy in the crown diameter and leaf area.

5.2 Suggestion

The result above it can be suggested that:

1. Choose shoots as uniformly as possible so that measurements are more accurate.
2. For indoor modern farming with light-controlled environment, it is recommended to learn and check on the optimum light intensity for the specific plant to give the best results.
