ABSTRAK

Tujuan Penelitian

Pelaksanaan program pemberian TTD pada remaja putri di Wilayah Kerja Puskesmas Andalas belum mencapai target kota (100%), tetapi sudah mencapai target nasional (58%). Tujuan penelitian ini adalah untuk mengetahui gambaran dan melakukan evaluasi pelaksanaan program pemberian TTD pada remaja putri di Wilayah Kerja Puskesmas Andalas Kota Padang Tahun 2023.

Metode

Penelitian menggunakan metode kualitatif dengan teori pendekatan sistem. Penelitian dilakukan pada bulan Desember 2022-Juli 2023. Informan penelitian berjumlah 23 orang, teknik penentuan informan yaitu *purposive sampling*. Metode pengumpulan data melalui wawancara mendalam, telaah dokumen, dan FGD. Analisis data dengan cara analisis konten. Data diolah dengan triangulasi sumber dan triangulasi teknik.

Hasil

Hasil penelitian diperoleh informasi pada unsur masukan, sarana dan prasarana masih belum sesuai dengan pedoman, dan metode yang digunakan kurang efektif. Pada unsur proses terjadi ketidaksesuaian pada pelaksanaan. Pada unsur keluaran yaitu belum tercapainya target kota (100%), tetapi sudah mencapai target nasional (58%).

Kesimpulan

Pelaksanaan program pemberian TTD pada remaja putri masih belum maksimal, sehingga diperlukan peningkatan kegiatan berupa sosialisasi yang lebih spesifik dan rutin terkait TTD.

EVALUATION OF THE BLOOD SUPPLEMENTATION TABLET PROGRAM IN ADOLESCENT GIRLS IN THE WORK AREA OF THE ANDALAS HEALTH CENTER IN PADANG CITY IN 2023

xii + 117 pages, 18 tables, 15 pictures, 9 attachments

Abstract

Objective

The implementation of the Blood Supplementation Tablet administration program for adolescent girls in the Andalas Public Health Center Working Area has not yet reached the city target (100%), but has reached the national target (58%). The purpose of this study was to determine the description and evaluate the implementation of the Blood Supplementation Tablet administration program in adolescent girls in the Working Area of the Andalas Public Health Center, Padang City in 2023.

Method

Qualitative methods with a systems approach theory were used in this study. The research was conducted from December 2022 to July 2023. A total of 23 research informants were selected using the purposive sampling technique. The data collection methods employed in this study were in-depth interviews, document reviews, and focus group discussions (FGDs). Data analysis was conducted using content analysis. The data underwent source triangulation and technique triangulation.

Results

The results indicate that the input elements, facilities, and infrastructure did not comply with the guidelines and that the methods employed were comparatively less effective. A discrepancy was noticed in the implementation process. The city target has not yet been achieved at 100%, yet the national target (58%) was attained in the output element.

Conclusion

The implementation of the Blood Supplementation Tablet program for adolescent girls is suboptimal. Therefore, there is a necessity to conduct activities more regularly and specifically, such as socialization related to Blood Addition Tablets.
