ABSTRAK

Tujuan Penelitian

Berdasarkan studi pendahuluan terkait pencatatan dan pelaporan program penanggulangan TB di Puskesmas Pauh dan Puskesmas Andalas didapatkan bahwa pelaksanaannya masih kurang efektif dan masih terdapat masalah seperti data yang diinput SITB tidak sinkron dengan pencatatan manual. Penelitian ini bertujuan untuk mengetahui secara mendalam sistem pencatatan dan pelaporan program TB mulai dari pasien, laboratorium, dan logistik di Puskesmas Andalas dan Puskesmas Pauh Kota Padang Tahun 2023.

Metode

Jenis penelitian ini adalah kualitatif yang dilakukan pada Januari-Agustus 2023, dengan informan sebanyak 8 orang yang dipilih melalui teknik *purposive sampling*. Pengumpulan data dilakukan dengan wawancara mendalam, observasi, dan telaah dokumen.

Hasil

Pencatatan dan pelaporan program penanggulangan TB di kedua puskesmas dilakukan secara manual dan elektronik (SITB) mulai dari pasien, laboratorium, dan logistik. Perbedaan yang ditemukan yaitu pencatatan di Puskesmas Andalas konsisten dalam pengisian form manual dan SITB, berbeda dengan Puskesmas Pauh yang masih terdapat inkonsistensi sehingga memengaruhi kualitas data yang dihasilkan. Selain itu, kedua puskesmas masih ditemukan data yang kurang lengkap. Pencatatan dilakukan setiap hari dan pelaporan dikirimkan ke DKK Padang dalam bentuk laporan bulanan, triwulan, dan tahunan.

Kesimpulan

Pelaksanaan pencatatan dan pelaporan program TB di kedua puskesmas sudah sesuai dengan pedoman pelaksanaan namun belum optimal. Disarankan agar kedua puskesmas memaksimalkan pengisian data di register manual dan SITB dengan konsisten dan lengkap.

ABSTRACT

Objectivities

Based on a preliminary study regarding the recording and reporting of TB control programs at the Pauh Public Health Center and Andalas Health Center, it was found that the implementation was still ineffective and there were still problems such as the data entered by SITB was out of sync with manual recording. This study aims to find out in depth the TB program recording and reporting system starting from patients, laboratories, and logistics at the Andalas Health Center and Pauh Health Center, Padang City in 2023.

Method

This type of research is qualitative which was conducted in January-August 2023, with 8 informants who were selected through a purposive sampling technique. Data collection was carried out by in-depth interviews, observation, and document review.

Results

Recording and reporting of TB control programs in both health centers is done manually and electronically (SITB) starting from patients, laboratories, and logistics. The difference found was that the recording at the Andalas Health Center was consistent in filling in the manual and SITB forms, in contrast to the Pauh Health Center where there were still inconsistencies that affected the quality of the data produced. In addition, the two puskesmas still found incomplete data. Recording is done every day and reporting is sent to DKK Padang in the form of monthly, quarterly and annual reports..

Conclusion

The recording and reporting of the TB program at the Andalas Public Health Center and the Pauh Public Health Center are in accordance with the implementation guidelines but not optimal. It is recommended that the two puskesmas maximize reporting, especially in the laboratory and logistics.
