ABSTRAK

Tujuan Penelitian

Sistem Informasi Puskesmas (SIP) di Puskesmas Silago dalam pengumpulan data masih sering terlambat dan adanya kekosongan data sebesar 25,2% tahun 2016. Tujuan penelitian ini adalah menganalisis pelaksanaan Sistem Informasi Puskesmas di Puskesmas Silago Kabupaten Dharmasraya Tahun 2017.

Metode

Jenis penelitian kualitatif. Informan penelitian 9 orang yang ditentukan dengan teknik purposive sampling. Pengumpulan data dengan wawancara mendalam, observasi, telaah dokumen, dan focus group discussion. Pengolahan dan analisis data menggunakan content analysis. Menjaga keabsahan data menggunakan triangulasi sumber dan metode.

Hasil

Tenaga pengelola SIP di Puskesmas Silago hanya satu orang dan bekerja sebagai dokter. Ketersediaan data masih banyak yang kosong, perangkat keras masih bergabung dengan program lain karena dana untuk penyediaan alat penunjang tidak tersedia, petunjuk pelaksana tidak dimanfaatkan seperti yang ditetapkan undang-undang, pengolahan data berbentuk komputerisasi offline. Pengumpulan dan pelaporan data belum berjalan baik karena kurangnya tanggung jawab petugas dalam melaksanakan tugasnya serta akses internet yang tidak bagus sehingga pelaporan data ke Dinas Kesehatan tidak tepat waktu.

Kesimpulan

Pelaksanaan SIP di Puskesmas Silago belum berjalan baik karena masih terkendala dalam pelaksanaannya seperti keterbatasan tenaga, perangkat keras, dan jaringan internet sehingga pada pelaporan data tidak tepat waktu. SIP belum efektif dan belum diaplikasikan dengan baik. Disarankan kepada puskesmas untuk mengusulkan penambahan tenaga dan memberikan motivasi kepada petugas dalam melaksanakan tugasnya.

ABSTRACT

Objective

Public health centers information systems (SIP) at Silago public health centers in data collection is still too late and there is data void 25,2% year 2016. The purpose of this research is to analyze the implementation of public health centers information systems at Silago public Health Centers Dharmasraya Regency Year 2017.

Method

Type of qualitative research. Informant of research 9 people determined by purposive sampling technique. Data collection with in-depth interviews, observation, document review, and focus group discussion. Processing and data analysis using content analysis. Maintain validity of data using source and method triangulation.

Result

SIP manager at Silago public health centers is only one person and works as a doctor. The availability of data is still a lot of empty, hardware is still joined with other programs because the funds for the provision of supporting equipment is not available, implementer instructions are not used as defined by law, data processing is computerized offline. Data collection and reporting has not gone well because of the lack of responsibilities of officers in performing their duties as well as poor internet access so that data reporting to the health office is not timely.

Conclusion

Implementation of SIP at Silago public health centers has not run well because it is still constrained in the implementation such as limited power, hardware, and internet network so that the reporting of data is not timely. SIP has not been effective and has not been applied properly. It is suggested to the public health centers to propose additional staff and motivate the officers in performing their duties.
