**Faktor-Faktor Yang Mempengaruhi Perawat Dalam Pendokumentasian
Proses Keperawatan Di Ruang Rawat Inap RSJ Prof HB Sa'anin
Padang Tahun 2017**

ABSTRAK

Kinerja perawat dalam menerapkan asuhan keperawatan merupakan indikator mutu pada suatu rumah sakit. Hasil evaluasi pendokumentasian proses keperawatan di ruang rawat inap masih ada yang di bawah standar yaitu 85%. Tujuan penelitian ini adalah untuk mengetahui faktor-faktor yang mempengaruhi perawat dalam pendokumentasian proses keperawatan di ruang rawat inap RSJ Prof HB Sa'anin Padang. Penelitian ini merupakan penelitian deskriptif analitik dengan pendekatan *Cross Sectional Study* dengan jumlah sampel 52 orang. Analisis data dilakukan secara univariat dengan distribusi frekuensi dalam bentuk kategori dan bivariat dengan *Chi-Square*. Hasil penelitian didapatkan sebanyak 51,9% pendokumentasian proses keperawatan baik, menyatakan pelatihan baik (67,3%), supervisi baik (55,8%), motivasi baik (73,1%). Terdapat hubungan bermakna antara pelatihan dengan pendokumentasian proses keperawatan ($p=0,024$), terdapat hubungan bermakna antara supervisi dengan pendokumentasian proses keperawatan ($p=0,006$), dan terdapat hubungan bermakna antara motivasi dengan pendokumentasian proses keperawatan ($p=0,001$). Disarankan untuk RSJ Prof HB Sa'anin Padang agar dapat merubah metode pencatatan pendokumentasian proses keperawatan dari tulisan menjadi metode *check list*.

*The Factors Affecting Nurses in Documentation Nursing Process In Impatient service Of
Regional Public Hospital Of RSJ Prof HB Sa'anin
Padang in 2017*

ABSTRACT

The performance of nurses in applying nursing care is an indicator of quality in a hospital. In reality less than 60 % of nurses who carry out the nursing process. The purpose of this study is to determine the factors that affect the nurses in documenting the nursing process in impatient service of regional public hospital of RSJ Prof HB Saanin Padang.. This research was a descriptive analytic approach Cross Sectional Study with a sample of 52 people. The data were analyzed with univariate by using distribution in the form of categories and bivariate of the Chi-Square. The results obtained as much as 51.9% documentation of nursing is good, good training (67,3%), good supervision (55,8%), good motivation (73,1%). There is a significant relationship between training and documentation of nursing process ($p=0.024$), there was a significant relationship between supervision and documentation of nursing process ($p=0.006$), there was a significant relationship between motivation and documentation of nursing process ($p=0.001$). Recommended for RSJ Prof HB Sa'anin Padang to be able to change the method of recording documentation of nursing process from writing to check list method.
