**ABSTRACT**

This research aims to determine the effect of firm size, business risk and profitability ratios on capital structure in manufacturing companies listed on the Indonesia Stock Exchange since 2012 until 2015. This study also aims to obtain empirical evidence about the effect of firm size, business risk and Profitability ratios to the company's capital structure.

Sample selection was done by using purposive sampling method and obtained 65 companies as sample. The method of analysis used is descriptive statistics, classical assumption test, multiple linear regression analysis, hypothesis testing and coefficient of determination test. Independent variables in research in this study are company size, business risk and profitability ratio. While the dependent variable used in this study is the capital structure.

The results of this research prove that simultaneously (test f) significant value  $<0.05$  of 0.644, which means the three independent variables used in this study ie firm size, business risk and profitability ratio has no significant effect on the company's capital structure.

**Keywords:** Company size, Business Risk, Profitability Ratio, Capital Structure
