<b>ABSTRACT</b>			
<b>FACTORS RELATED TO MATERNAL COMPLIANCE TO CHECK HER CHILDREN WHOM CLOSED CONTACT WITH TUBERCULOSIS PATIENT AT HEALTH CARE OF LUBUK ALUNG PADANG PARIAMAN</b>			
<b>Thesis by : Adriyati</b>			
<b>Preceptor I : Prof.DR.dr. Rizanda Machmud, M. Kes., FISP.H., FISC.M</b>			
<b>Preceptor II : DR.dr.H.Edison,MPH</b>			
<b>Objective</b>			
Padang Pariaman is a district white the 2 <sup>nd</sup> highest number of tuberculosis patients in West Sumatera. In 2011, TB case are 639, 9 of which are children (1,4%), In 2012 there are 612 case, 29 of which are children (4,7%). Them in 2013 there are 16 children whith tuberculosis (2,8%). Most of them stay arround Lubuk Alung.			
The aim of this study is to know about distribution of respondents, factors related to maternal complience to check her children whom closed contant with TB patients and to know input, process & output.			
<b>Method</b>			
This study use quantitative method with cross sectional design. Then we also use qualitative method wite interview to words P2TB officers, head of Lubuk Alung Health Center, supervisor, and the respondents. Data are primer and secondary data.			
<b>Result</b>			
The results of quantitative data deskribe that most of the respondents are > 35 year old, elementary school graduate, woorking mother, disobedient mother, respondents are high knowledge (90%), positive personality (70%), medium distance (92,5%), free payment (97,5%), traveling time (95%), private vehicle (75%).			
The result of qualitative data show that there's no any regulation and method to check the children who household contact with tuberculosis pahents. There's no financial help from government / health care. There are P2TB officers at Lubuk Alung health center, but they have not get DOTS training. There are no enough sufficient infrastructure or room to examine that children. TB program is good enough, but TB 01 document is not written completely.			
<b>Conclusion</b>			
The conclusion are mother have high knowledge, positive personality, have hose near from have care, but most of them are disobedient mother. Input, process, out put components have not been done well for checking children who household contacted with TB patients at Lubuk Alung health center.			
Bibliography : 21 (2003-2014)			
Key word : obedience, check of children, house contact			

Thesis has been maintained in the hearing examiner thesis and passed on 24th of July, 2017.  
Abstrat has been approved by the testing team.
