**ANALISIS UTILISASI KAMAR OPERASI DI INSTALASI BEDAH
SENTRAL RSUP Dr.M.DJAMIL PADANG TAHUN 2017**

viii+ 88 Halaman+34 tabel+ 2 gambar+20 Lampiran

Salah satu indikator non klinik di kamar operasi adalah ulitiisasi kamar operasi. Dengan mengetahui utilisasi kamar operasi, maka akan diperoleh gambaran efisien kamar operasi di RSUP Dr.M.Djamil Padang.

Metode pada penelitian ini adalah kualitatif. Dengan teknik pemilihan informan dengan *purposive sampling*.

Hasil penelitian ini berdasarkan *Input* kebijakan atau standar operasional prosedur yang mengatur kebijakan mengenai pelaksanaan operasi elektif belum terlaksana dengan baik, terdapatnya kekurangan tenaga di kamar operasi, alat penunjang kurang tersedia. Berdasarkan *Process* pelaksanaan operasi yang tidak sesuai jadwal, pelaksanaan pre-operatif jarang dilakukan, terdapatnya penundaan dan pembatalan operasi, pelaksanaan operasi yang memanjang, dan waktu jeda operasi lama. Berdasarkan *Output* utilisasi kamar operasi yang rendah karena masih banyaknya kamar operasi yang belum termanfaatkan sesuai pemanfaatanya.

Pemanfaatan kamar operasi di IBS RSUP Dr.M.Djamil padang masih rendah, perlu perubahan sistem pengaturan tata kelola pelaksanaan operasi mulai dari penjadwalan, sift perawat kamar operasi. Pelaksanaan pre-operatif. Sehingga mengurangi penundaan dan pembatalan operasi.

ABSTRACT

One of the non-clinical indicators in the operating room is the operation room utilization. By knowing the utilization of operating room, it will get an efficient picture of operating room in Dr.M.Djamil Central Hospital Padang.

The method using qualitative research. By using informant selection technique with purposive sampling.

The results of this study based on Input policy or standard operational procedures that regulate the policy regarding the implementation of elective operations has not been done well, there is a lack of manpower in the operating room, supporting equipment less available. Based on the Process of non-scheduling operations, pre-operative execution is rare, there are delays and cancellations of operations, prolonged operations, and long-term operational breaks. Based on the low operating room utilization output because there are still many operating rooms that have not been utilized according to its utilization.

Utilization of operating room at Central Surgical Installation Dr.Djamil Central Hospital low field, it is necessary to change the system of governance arrangement of operation implementation starting from scheduling, sift nurse operating room. Implementation of pre-operative. Thus reducing delays and cancellations of operations.
