ABSTRACT

UNIVERSITAS ANDALAS

This experiment was carried out at 960 m above sea level in a wire house at Air Batumbuk, Solok Regency, West Sumatera from March to May 2015. A completely randomized design was used with five treatments (250, 500, 750, 1000, 1250 ppm GA3) in triplicate. Analysis of variance was performed using the F-Test and statistically significant differences were further tested with Duncan's New Multiple Range Test also at the 5% level. A concentration of 1250 ppm GA3 gave the best results
