

CHAPTER VI

CONCLUSION AND RECOMMENDATION

6.1. Conclusion

This research analyzes the influence of democracy on corruption in Asian democracy country period 2010-2015. This research uses another variable which is human development index. This research has a time series data and cross-section from 2010-2015 and analyze 22 Asian Democracy country. So the conclusion of this research are:

- a. Democracy has a positive influence and not significant affected to corruption perception index in Asian Democracy country on period 2010 until 2015. It is based on the regression coefficient of the variable democracy index with positive coefficients of 0.138629 on corruption and has Probability $0.0656 > 0.05$, which means the regression coefficient is positive and not significant.
- b. Human Development Index has a positive influence and significant affected to corruption perception index in Asian Democracy country on period 2010 until 2015. It is based on the regression coefficient of the variable HDI with positive coefficients of 11.20160 on corruption and has Probability $0.0000 < 0.05$, which mean the regression coefficient is positive and significant.

6.2. Suggestion

Based on conclusions above, then – put forward some suggestions as follows:

a. For The Government and Society of Asian Democracy Country.

Democracy index and human development index has positive influence in increasing corruption perception index in Asian democracy country examined, then the democracy index and human development index should continue to be improved in order to get a high score on the corruption perception index which ultimately can provide prosperity for communities across the country. Moreover, in Asian, the problem of corruption is still quite high visible from the corruption perceptions index. Therefore, cooperation among Asian countries needs to be increased again in order to fight corruption for the sake of the realization of human development high on Asian democracy country. Especially to Indonesia, we must seen Singapore, while their democracy index not too high than Indonesia, but the CPI higher than us.

b. For CivitasAcademica.

a. May use other variables or state/other countries to enrich the insights into human development.

b. May use other analytical tools such as Error Correction Model so that it can be known to be short term and long term of the variables examined against human development. As well as the analysis of causality thus known cause and effect of the variables examined.
