**Hubungan Dukungan Keluarga Dengan Kunjungan Lansia Dalam Mengikuti
Posyandu Lansia di Kelurahan Ngalau Wilayah Kerja Puskesmas Gunung
Padang Panjang tahun 2018**

Rendahnya kunjungan posyandu lansia dikarenakan lansia tidak ada yang mengantar atau menjemput, lansia lupadengan jadwal posyandu dan tidak ada yang mengingatkannya. Data yang di dapat dari Dinas Kesehatan Kota Padang Panjang jumlah kunjungan lansia ke posyandu lansia di wilayah kerja Puskesmas Gunung tahun 2016 sebanyak 499 orang, Sedangkan pada tahun 2017 kunjungannya berkurang menjadi 207 orang. Penelitian ini bertujuan untuk mengetahui hubungan dukungan keluarga dengan kunjungan lansia dalam mengikuti posyandu lansia di Kelurahan Ngalau Wilayah Kerja Puskesmas Gunung Padang Panjang tahun 2018. Jenis penelitian ini *analitik* dengan pendekatan *Cross Sectional Study*. Penelitian dilakukan pada 155 orang lansia yang diambil secara *simple random sampling*. Instrumen penelitian terdiri dari kuesioner. Hasil penelitian ini menunjukkan lebih dari separoh 50,3% lansia kurang melakukan kunjungan posyandu. Kurang dari separoh (45,2%) keluarga kurang mendukung lansia dalam kunjungan posyandu. Kurang dari seaproh 44,5% keluarga kurang dalam dukungan emosional pada lansia dalam kunjungan posyandu. Kurang dari separoh (45,8%) keluarga kurang memberikan dukungan penghargaan dalam kunjungan posyandu. Lebih dari separoh (53,5%) keluarga kurang memberikan dukungan instrumental dalam kunjungan posyandu Lebih dari separoh 51,6% keluarga kurang memberikan dukungan informasi dalam kunjungan posyandu. Hasil uji statistik *chi square* menunjukkan ada hubungan dukungan emosional, penghargaan, instrumental, informasi dengan kunjungan posyandu lansia. Berdasarkan hasil penelitian diharapkan keluarga dapat memberikan motivasi pada lansia untuk datang melakukan kegiatan posyandu lansia dan keluarga memberikan ketersediaannya mengantarkan lansia ke posyandu.

The Relationship between Family Support and Elderly Visits in Participating in Elderly Posyandu in Ngalau Village in Working Area of Gunung Padang Panjang Health Center 2018

ABSTRACT

The low number of visits to the posyandu for the elderly because there was no one to take or pick up, the elderly forgot about the posyandu schedule and none reminded. Data was obtained from the Padang Panjang City Health Office, the number of elderly visits to elderly posyandu in working area of Gunung health center in 2016 was 499 people, while in 2017 his visit was reduced to 207 people. This study aims to determine the relationship between family support and elderly visits to the elderly posyandu in Ngalau Village in working area Gunung Padang Panjang Health Center in 2018. This type of research is analytical with the approach Cross Sectional Study. The study was conducted on 155 elderly people taken by simple random sampling. The research instrument consisted of a questionnaire. The results of this study indicate that more than half of the 50.3% of the elderly did not visit the Posyandu. Less than half (45.2%) of families support the elderly in the posyandu visit. Less than half of 44.5% of families lack emotional support for the elderly during Posyandu visits. Less than half (45.8%) of families did not provide award support during Posyandu visits. More than half (53.5%) of families did not provide instrumental support during visiting the posyandu. More than half of the 51.6% families did not provide information support during visiting the Posyandu. The results of the chi square statistical test showed that there was a relationship of emotional support, appreciation, instrumental, information with the elderly posyandu visit. Based on the results of the study, it is expected that families can provide motivation to the elderly to come to the posyandu activities for the elderly and families to provide availability to deliver the elderly to the posyandu.
