

CHAPTER IV

CONCLUSION

4.1 Conclusion

Based on this study, 60 quantifiers from George Orwell's English novel *Animal Farm* and its Indonesian translation, *Republik Kerajaan*, were collected as data. There are two important points in this study. The first one is the type of quantifier and its usage: countable noun, uncountable noun, and both countable noun and uncountable noun, where for each category the frequency is 20. The second one is the translation technique applied to translate quantifiers. Seven translation techniques were applied: adaptation 4 times, addition 9 times, linguistic amplification 5 times, literal 24 times, modulation 6 times, reduction 9 times, and transposition 3 times.

4.2 Suggestion

This study provides an understanding of how to translate quantifiers and their usage, especially in novels. The study appears to be far from perfect, yet there are some misspellings and errors in grammar. Hopefully, the next study could analyze and explain more topics or theories about quantifiers, not only in novels but also in other translation works such as films, short stories, etc. Therefore, this study could be used as a reference for a better one in the future.
