**ABSTRAK**

**Tujuan Penelitian**

Data menunjukkan terdapat 361 angka kecelakaan kerja di Kota Padang pada tahun 2022. Penelitian ini bertujuan untuk mengetahui hubungan faktor *immediate causes* dengan kecelakaan kerja nelayan di pos UKK Puskesmas Bungus Kota Padang tahun 2023.

**Metode**

Penelitian kuantitatif dengan desain *cross sectional*. Dilakukan pada bulan Januari sampai September 2023 di pos UKK nelayan Puskesmas Bungus dengan populasi 95 orang dan sampel 86 orang. Analisis data menggunakan analisis univariat dan bivariat dengan uji *chi square*.

**Hasil**

Hasil uji statistik menunjukkan 60,5% nelayan pernah mengalami kecelakaan kerja. Hasil analisis bivariat menunjukkan terdapat hubungan *unsafe condition* dengan kecelakaan kerja ( $p\text{-value} = 0,012$ ). Tidak terdapat hubungan *unsafe action* dengan kecelakaan kerja ( $p\text{-value} = 0,083$ ).

**Kesimpulan**

Terdapat hubungan antara *unsafe condition* dengan kecelakaan kerja pada nelayan anggota pos UKK Puskesmas Bungus Tahun 2023. Diharapkan kepada petugas puskesmas untuk meningkatkan kegiatan promotif dan preventif terkait kecelakaan dan penyakit akibat kerja nelayan, bahaya merokok saat bekerja, maupun cara menggunakan APD dengan benar.

**RELATIONSHIP BETWEEN IMMEDIATE CAUSES AND WORK ACCIDENTS  
BY FISHERMEN AT OCCUPATIONAL HEALTH CARE POST IN BUNGUS  
PUBLIC HEALTH CENTER PADANG IN 2023**

xi + 73 pages, 11 tables, 7 pictures, 8 appendices

**ABSTRACT**

**Objective**

Data shows there were 361 work accidents in Padang City in 2022. This study aims to determine the relationship between immediate causes and work accidents by fishermen at OHE Post in Bungus Public Health Center Padang in 2023.

**Method**

Quantitative research with cross sectional design. The research was conducted in January – September 2023 at OHE Post in Bungus Public Health Center Padang with a population of 95 people and 86 samples. Data analysis using univariate and bivariate analysis with chi square test.

**Result**

The results of statistical tests show that 60,5% of fishermen have experienced work accidents. The results of bivariate analysis showed a relationship between unsafe condition with work accidents ( $p\text{-value} = 0,012$ ). There was no relationship between *unsafe action* with work accidents ( $p\text{-value} = 0,083$ ).

**Conclusion**

There is a relationship between unsafe conditions and work accidents by fishermen at OHE Post in Bungus Public Health Center. It is expected that public health officers will increase promotional and preventive activities related to accidents and diseases caused by fishermen's work, the dangers of smoking while working, and how to use PPE correctly.
