ABSTRACT

The level of farmer group capability provides an overview of the farmer group's capability, which is a combination of the strengths or abilities of its group members and will increase effectiveness and optimize agricultural development activities. The population of this research is all agricultural groups in Sawahlunto City. The samples were chosen randomly and used the Slovin formula, namely 76 samples which were measured using a questionnaire in the farmer group class ability guide (Head of BPPSDMP Regulation No: 168/Per/SM.170/J/11/11). The aim of this research is to describe and analyze the capabilities of farmer groups in Sawahlunto City and to analyze the development of the capabilities of farmer groups in Sawahlunto City. The research method used is quantitative research with Paired Sample t-Test technical analysis. The results of the research show that the highest ability of farmer groups in Sawahlunto City occurs in the aspect of ability to carry out activities with indicators of carrying out business. Meanwhile, the lowest is the capability planning aspect with business planning indicators. The average capacity of farmer groups in Sawahlunto City has decreased.
