ABSTRACT

Differences in educational backgrounds or incompatibility with the position held are one of the sources of job insecurity among employees in a state-owned enterprises (BUMN). This study aimed to describe of job insecurity among employees from one of the BUMN companies in Padang. This study used a descriptive quantitative method with a sample size of 54 employees. The sampling technique used was total population sampling. Data was collected was conducted using the job insecurity scale by Ashford et al. (1989). The reliability of the job insecurity scale was .934. The results of this study showed that the level of job insecurity among employees in a the state-owned enterprises (BUMN) in Padang was in the moderate category, with 29 out of 54 employees (53,7%) falling into this category. The meaning was quite high in the mean importance of job features (4.19) section, which was related to job position and salary, and had a significance of .014. Then, it was quite low in the mean importance of possible changes to a total job (3.48) section, which was related to job position transfers and mutations. Additionally, there were no significant differences in job insecurity based on demographic factors.
