ABSTRAK

Tujuan Penelitian

Pada tahun 2022 program LINTAS Diare pada balita di Puskesmas Andalas mengalami penurunan yaitu 76% dari capaian target 100%. Tujuan penelitian menganalisis sistem pelaksanaan program LINTAS Diare pada balita tahun 2023.

Metode

Desain penelitian adalah kualitatif deskriptif dengan 9 informan menggunakan teknik *purposive sampling*. Penelitian dilakukan di Puskesmas Andalas pada November-Juli 2024. Pengumpulan data dilakukan melalui wawancara mendalam, observasi dan telaah dokumen. Data diolah melalui reduksi data, penyajian data, penarikan kesimpulan. lalu dianalisis dengan triangulasi sumber dan metode.

Hasil

Permenkes RI No 1216 Tahun 2001 menjadi pedoman program LINTAS Diare, namun masih ditemukan petugas yang belum mengetahui kebijakan tersebut. permasalahan lain ditemukan yaitu beban kerja pada petugas, dana dan sarana prasarana yg terbatas, belum terlaksana dengan optimal penyusunan target program dan penyuluhan pencegahan, belum sesuai penerapan program LINTAS Diare pada balita dengan buku saku program, serta keterlambatan pada pencatatan dan pelaporan. Namun, monitoring evaluasi sudah dilakukan.

Kesimpulan

Pelaksanaan program LINTAS Diare pada balita di Puskesmas Andalas masih belum optimal. Puskesmas memerlukan perbaikan dari segi dana, tenaga, sarana dan prasarana, serta penerapan program LINTAS Diare pada balita yang sesuai dengan standar Buku Saku Program LINTAS Diare.

ANALYSIS OF THE IMPLEMENTATION SYSTEM OF THE CROSS-DIARRHEA PROGRAM FOR TODDLERS IN THE WORKING AREA OF THE ANDALAS HEALTH CENTER, PADANG CITY IN 2023

xi+168, 36 tables, 12 pictures, 12 appendices

ABSTRACT

Objectives

The Andalas Health Center implemented the LINTAS Diarrhea program for toddlers, which decreased to 76% of the targeted achievement in 2022. This study aimed to analyze the implementation system of the LINTAS Diarrhea program for toddlers at the Andalas Health Center in 2023.

Method

The research design was qualitative descriptive involving 9 informants with purposive sampling techniques. The research was conducted at the Andalas Health Center from November to July 2024. Data collection was carried out through in-depth interviews, observations, and document reviews. The data was processed through data reduction, data presentation, and conclusion drawing, then analyzed using source triangulation and methods.

Result

The implementation of the LINTAS Diare program was guided by the Indonesian Minister of Health Regulation Number 1216 of 2001, but there were still officers who did not know the applicable policy. The personnel involved had double jobs and high workloads. The availability of funds and infrastructure facilities was still limited, the preparation of program targets and prevention counseling had not been carried out optimally. The implementation of the LINTAS Diarrhea program for toddlers had not been in accordance with the LINTAS Diarrhea Program Pocket Book. Prevention counseling had not been carried out optimally. There was a delay in recording and reporting. Monitoring and evaluation had been carried out.

Conclusion

The implementation of the LINTAS Diarrhea program for toddlers at the Andalas Health Center was still not optimal. The health center needed improvements in terms of funds, manpower, facilities, and infrastructure, as well as the implementation of the LINTAS Diarrhea program for toddlers in accordance with the LINTAS Diarrhea Program Pocket Book.
