Effect of Lemon Therapy Aroma on Nausea and Vomiting and Comfort of Drug-Resistant Tuberculosis Patients at Dr M Djamil Padang Hospital

xvii + 135 pages + 9 tables + 6 Schemes + 2 Figures + 12 Appendixes

ABSTRACT

Drug-resistant tuberculosis is still a global health problem. The length of treatment and the side effects of many drugs have the potential to be the cause of patient non-compliance. The side effects most felt by patients are nausea, vomiting, and discomfort disturbances. Lemon aromatherapy is one of the complementary therapies that has been used for a long time, but in patients with resistant tuberculosis, this therapy has not been applied. The purpose of this study is to determine the effect of lemon aromatherapy on nausea, vomiting and comfort of drug-resistant tuberculosis patients at Dr. M Djamil Padang Hospital. This type of research is quantitative research with a quasi-experimental design pretest - post test without control group design. The research was conducted on 15 respondents. The instrument used RINV and SGCQ questionnaires. The lemon aromatherapy intervention was carried out for 3 days, by giving a mask that has been given 3 drops of lemon aromatherapy to patients with drug-resistant tuberculosis. The number of samples in this study was as many as 15 people using the total sampling technique. The instrument used in this study is a surgical mask given 3 drops of lemon aromatherapy. The mask has been given 3 drops of lemon aromatherapy. Statistical analysis using the Wilcoxon test. The results of this study showed the effect of lemon aromatherapy on nausea and vomiting ($p = 0.046$) and patient comfort ($p = 0.014$). Lemon aromatherapy is effective in providing tuberculosis patients who experience nausea, vomiting and discomfort disorders. Lemon aromatherapy can be implemented as a complementary therapy option by nurses in overcoming their patients' problems.
