ABSTRAK

Tujuan Penelitian

Periode 1000 hari pertama kehidupan ini merupakan waktu yang tepat untuk melakukan pencegahan dan penanggulangan terhadap *stunting*. Tujuan dari penelitian ini untuk mengetahui pelaksanaan program 1000 HPK di tingkat keluarga pada anak *stunting* usia 0-24 bulan di Puskesmas Sirukam tahun 2018.

Metode

Penelitian ini menggunakan metode kualitatif dengan pendekatan sistem, informan penelitian berjumlah 10 orang, informan ditentukan dengan teknik *purposive sampling*. Metode Pengumpulan data melalui wawancara mendalam, observasi, dan telaah dokumen. Analisis data dilakukan dengan cara triangulasi sumber dan triangulasi metode.

Hasil

Hasil penelitian didapatkan untuk komponen input: petugas kesehatan sudah mencukupi, namun belum maksimal dalam pelaksanaan program. Biaya sudah mencukupi, sarana dan prasarana untuk pelaksanaan program sudah memadai. Komponen proses: Program PMT Bumil, pemberian tablet Fe, Inisiasi Menyusui Dini, ASI Ekslusif, Imunisasi dasar belum terlaksana dengan baik. Program suplementasi Vitamin A sudah terlaksana dengan baik. Program Akses air bersih dan sanitasi layak belum terlaksana dengan baik. Output: pelaksanaan program 1000 hari pertama kehidupan ditingkat keluarga pada anak *stunting* usia 0-24 bulan di Puskesmas Sirukam tahun 2018 belum mencapai target.

Kesimpulan

Pelaksanaan program 1000 hari pertama kehidupan ditingkat keluarga pada anak *stunting* usia 0-24 bulan di Puskesmas Sirukam tahun 2018 belum berjalan dengan baik. Diharapkan kepada Puskesmas Sirukam untuk memaksimalkan lagi pelaksanaan program 1000 hari pertama kehidupan serta memberikan pendidikan gizi bagi masyarakat agar pengetahuan masyarakat meningkat dan bisa merubah perilaku kesehatannya kearah yang lebih baik.

Kata Kunci : *Stunting*, 1000 hari pertama kehidupan.

ANALYSIS OF THE IMPLEMENTATION OF THE FIRST 1000 DAYS OF LIFE PROGRAM AT THE FAMILY LEVEL IN STUNTING CHILDREN AGED 0-24 MONTHS IN SIRUKAM PUBLIC HEALTH CENTRE IN 2018
xi + 84 pages, 15 tables, 1 images, 13 attachments

ABSTRACT

Research purposes

The first 1000 days of life is the right time to prevent and overcome stunting. The purpose of this study was to determine the implementation of the 1000 HPK program at the family level in stunting children aged 0-24 months at Puskesmas in 2018.

Method

This research was a qualitative method with a systems approach, the total of research informants were 10 people, the informants determinated by purposive sampling. Methods of collecting data obtained through in-depth interviews, observations, and document review. Data analysis was done by means of source triangulation and method triangulation.

Results

The results of the study were obtained for the input component: health staff was sufficient, but it was not maximal in implementing the program. The cost are sufficient, the facilities and infrastructure for the implementation of the program are adequate. Components of the process: giving additional food for pregnancy, giving Fe tablets, Early Breastfeeding Initiation, Exclusive Breastfeeding, Basic Immunization has not been implemented properly. The Vitamin A supplementation program has been implemented well. The program for access to clean water and proper sanitation has not been implemented properly. Output: the implementation of the first 1000 days of life program at the family level for stunting children aged 0-24 months at Puskesmas Sirukam in 2018 has not reached the target yet.

Conclusion

The implementation of the first 1000 days of life program at the family level for stunting children aged 0-24 months at Puskesmas Sirukam 2018 has not gone well. It is expected that Puskesmas Sirukam will maximize the implementation of the first 1000 days of life program and provide nutrition education for the community so that public knowledge will improve and can change their health behavior towards a better health.

Keywords : Stunting, the first 1000 days of life
