**ABSTRAK**

**Tujuan Penelitian**

Puskesmas Seberang Padang merupakan puskesmas dengan penemuan kasus HIV positif tertinggi dan cenderung meningkat di setiap tahunnya seperti 30 kasus (2015), 41 kasus (2016), 24 kasus (2017) dan 28 kasus (2018). Penelitian ini bertujuan untuk mengetahui pelaksanaan LKB HIV-IMS di Puskesmas Seberang Padang Tahun 2019.

**Metode**

Penelitian ini menggunakan metode kualitatif yang dilakukan di Puskesmas Seberang Padang Kota Padang pada bulan Desember 2018 hingga Juni 2019. Informan penelitian ini berjumlah 8 orang yang ditentukan menggunakan teknik *purposive sampling*. Metode pengumpulan data dengan teknik wawancara mendalam, observasi, dan telaah dokumen. Pengelolaan data dengan menggunakan model *Mile dan huberman* serta analisis data dengan triangulasi metode dan sumber.

**Hasil Penelitian**

Hasil penelitian ini menunjukkan bahwa tenaga kesehatan yang terlibat dalam pelaksanaan LKB telah mencukupi dan mendapat pelatihan meskipun belum berkala. Ketersediaan sarana dan prasarana sudah cukup, namun ruangan khusus belum sesuai standar. Dana yang ada sudah cukup. Pelaksanaan belum sesuai dengan SOP. Layanan terintegrasi dan terdesentralisasi meliputi, skrining TB-HIV, konseling dan tes HIV, dan terapi HIV. Paket layanan belum dikatakan komprehensif karena layanan LASS dan PTRM belum ada. Rujukan pasien dapat dilakukan ke RS Md.jamil dan RS Yos Sudarso. Sosialisasi ke tokoh kunci sudah dilaksanakan meskipun masih terdapat kendala.

**Kesimpulan**

Pelaksanaan LKB HIV-IMS sudah berjalan cukup baik. Diharapkan agar diadakan pelatihan secara berkala, adanya ruangan khusus yang lebih privasi, pemberian layanan secara maksimal, pelaksanaan sesuai SOP, dan menghilangkan stigma dan diskriminasi terhadap populasi kunci.

**ABSTRACT**

**Purpose**

Seberang Padang Health Center is the highest discovery of HIV case and the case tends to increase every year that is 30 cases in 2015, 41 cases in 2016, 24 cases in 2017, and 28 cases in 2018. This study aims to know the implementation of SCS HIV-STIs in Seberang Padang Health Center in 2019.

**Method**

This study is qualitative study which has been done in Seberang Padang Health Center Padang City from December 2018-June 2019. There are 8 people informants in this study which are taken with *Purposive Sampling*. Data are collected through in-depth interview, observation, and document review. Data are organized with Mile and Huberman Model, and analyzed with method triangulation and source triangulation.

**Result**

Results of this study show that health workers which are involved in the implementation of SCS have been fulfilled enough, and have ever got special training inspite of unperiodic training. The availability of the facility is enough, but the special room has not fulfilled the standard yet. Budget is enough. The implementation is not in line with SOP. The Integrated and decentralized services including TB-HIV, counseling and HIV test, and ARV therapy. Service Packet can not be said "Comprehensive" because the LASS and PTRM do not exist yet. Patients can be referred to M. Djamil Hospital and Yos Sudarso Hospital. Socialization to the key figures has been done although there are some constraints .

**Conclusion**

The implementation of SCS HIV-STIs has been done well. Health workers such as pharmacists and nutritionists are involved in implementation of SCS, privatized special room, manage the funds well, based on SOP implementation, eliminate the stigma and discrimination to the key population are expected to be realized and improve socialization of HIV dangers.
