## ABSTRAK

Penelitian ini bertujuan untuk membuat alat scanner 3D dengan menggunakan *platform* mikrokontroler Arduino dan aplikasi Meshlab dengan biaya yang relatif lebih murah dibanding scanner 3D yang ada di pasaran saat ini. Scanner 3D terdiri atas mikrokontroler Arduino, sensor SHARP GP2Y0A41SK0F, dan motor stepper. Objek akan discan oleh sensor SHARP GP2Y0A41SK0F kemudian data yang didapat oleh sensor dikirimkan ke mikrokontroler Arduino, setelah data diproses di mikrokontroler, data akan disimpan kedalam kartu memori dan diproses nantinya di aplikasi Meshlab untuk menghasilkan model 3D dari objek . Data yang didapat dari ujicoba sistem menunjukkan bahwa objek yang discan sudah dapat menghasilkan model 3D dengan tingkat keberhasilan 80%

## **ABSTRACT**

This study aims to create a 3D scanner tool using the Arduino microcontroller platform and the Meshlab application at a relatively cheaper cost than 3D scanners currently on the market. The 3D scanner consists of an Arduino microcontroller, a SHARP GP2Y0A41SK0F sensor, and a stepper motor. The object will be scanned by the SHARP GP2Y0A41SK0F sensor then the data obtained by the sensor is sent to the Arduino microcontroller, after the data is processed in the microcontroller, the data will be stored in a memory card and processed later in the Meshlab application to produce a 3D model of the object. Data obtained from the system trial showed that the scanned object could produce a 3D model with a success rate of 80%

Keywords: 3D Scanner, Microcontroller, SHARP GP2Y0A41SK0F Sensor
