**ANALISIS KESIAPSIAGAAN TENAGA PUSKESMAS TERHADAP BANJIR  
DI PUSKESMAS SELAYO DAN MUARA PANAS, KABUPATEN SOLOK  
TAHUN 2019**

x + 71 halaman, 15 tabel, 2 gambar, 13 lampiran

**ABSTRAK**

**Tujuan**

Banjir merupakan salah satu bencana alam yang mengakibatkan banyak kerusakan dan menimbulkan banyak korban. Bencana banjir di Sumatera Barat merupakan kejadian terbanyak ke 3 selama tahun 2017. Banjir hampir terjadi setiap tahun di Kecamatan Kubung dan Bukit Sundi. Kesiapsiagaan tenaga Puskesmas akan sangat diperlukan untuk membantu masyarakat korban banjir. Penelitian ini bertujuan untuk menganalisis kesiapsiagaan tenaga puskesmas Selayo dan Muara Panas dalam menghadapi banjir dari segi input.

**Metode**

Jenis penelitian kualitatif dengan pendekatan sistem, dengan informan sebanyak 13 orang terdiri dari tenaga yang terlibat kedalam tim penanggulangan bencana di Puskesmas Selayo dan Muara Panas, serta pemegang program bencana di Dinas Kesehatan Kabupaten Solok. Teknik penentuan informan menggunakan *purposive sampling*. Penelitian ini dilakukan pada bulan September 2018-Juni 2019. Metode pengumpulan data dengan wawancara mendalam, telaah dokumentasi, dan observasi. Data dianalisis menggunakan triangulasi metode dan triangulasi sumber.

**Hasil**

Puskesmas Selayo dan Muara panas sudah memiliki sumber daya manusia untuk penanggulangan bencana, dengan adanya Surat Keputusan (SK) tim penanggulangan bencana, serta telah mendapatkan pelatihan, tetapi Kabupaten Solok belum mempunyai *Public Safety Center (PSC)*. Dana untuk penanggulangan bencana di Puskesmas Selayo dan Muara Panas sudah tersedia, namun belum tertuang kedalam Rencana Usulan Kegiatan (RUK). Sarana untuk penanggulangan bencana banjir masih ada beberapa yang belum tersedia. Sudah terdapat rencana kontijensi banjir.

**Kesimpulan**

Kesiapsiagaan tenaga Puskesmas Selayo dan Muara Panas sudah memiliki kapasitas untuk bencana banjir, dikarenakan sudah tersedianya sumber daya manusia, SK tim penanggulangan bencana, pedoman petunjuk kegiatan penanggulangan bencana, rencana kontijensi.

**ANALYSIS OF PREPAREDNESS FOR FLOOD AMONG HEALTH  
WORKERS IN SELAYO AND MUARA PANAS HEALTH CENTERS,  
SOLOK DISTRICT IN 2019**

x + 71 pages, 15 tables, 2 pictures, 13 appendices

**ABSTRACT**

**Objective**

Flood is one of the natural disasters which causes a lot of damage and causes many victims. Flood was top 3 of disaster the mostly happen in West Sumatra during 2017. Flood occur almost every year in Kubung and Bukit Sundi Districts. The purpose of this study to analyze the role of health workers in flood disaster preparedness in Selayo and Muara Panas Health Centers based on input.

**Method**

Research design used qualitative study with system approach, informant for the study amounted to 13 people including the health workers involved in the disaster management team at Selayo and Muara Panas Health Centers, and the person who in charge of disaster program in the Public Health Office in Solok Districts. Technique of determining informants was purposive sampling. This research was completed since September 2018 until June 2019. The methods of data collection were done by in-depth interviews, document review, and observation. Data analysis was using the triangulation of sources and methods.

**Result**

Selayo and Muara Panas Health Centers have human resources for disaster management, with the decision letter of the disaster management team and received training, but Solok District does not yet have Public Safety Center (PSC). Funds for disaster management in Selayo and Muara Panas Health Centers are available but not yet contained in the planned activity of health center. Some facilities of flood management do not exist yet. Flood contingency plans are already available.

**Conclusion**

Preparedness of health workers in Selayo and Muara Panas health centers already has the capacity for flood disasters, because of the availability of human resources, the decision letter of the disaster management team, guidelines for disaster management activities, contingency plans.
