Faktor-Faktor yang Memengaruhi Kepatuhan Perawat Dalam Pelaksanaan Timbang Terima Berdasarkan Standar Prosedur Operasional di Ruang Rawat Inap RS UNAND

ABSTRAK

Timbang terima berperan penting dalan pelaksanaan asuhan keperawatan. Timbang terima mengambil andil sebesar 80% dalam terjadinya *medical error*. Tujuan penelitian ini yaitu untuk mengetahui hubungan antara karakteristik perawat, motivasi, dan supervisi dengan kepatuhan perawat dalam pelaksanaan pelaksanaan timbang terima berdasarkan standar prosedur operasional di ruang rawat inap RS UNAND. Penelitian ini merupakan penelitian deskriptif analitik dengan pendekatan *cross sectional*. Sampel berjumlah 42 orang perawat dengan teknik pengambilan *total sampling*. Instrumen penelitian menggunakan kuesioner motivasi dan supervisi serta menggunakan lembar SPO timbang terima RS UNAND. Data dianalisis secara univariat dengan distribusi frekuensi dan bivariat dengan *chi-square*. Hasil penelitian adalah hampir seluruh perawat berusia 26 – 35 tahun dan berjenis kelamin perempuan. Sebagian besar perawat pendidikan Ners, masa kerja >3 tahun, memiliki motivasi tinggi, menerima supervisi yang baik, dan patuh dalam pelaksanaan timbang terima berdasarkan SPO. Terdapat hubungan yang signifikan antara motivasi dan supervisi dengan kepatuhan perawat pelaksanaan SPO timbang terima (p=0,013, p=0,001). Tidak terdapat hubungan yang signifikan antara umur, jenis kelamin, pendidikan, dan masa kerja dengan kepatuhan perawat pelaksanaan SPO timbang terima (p=0,227, p=0,246, p=0461, p=0,927) dimana nilai p>0,05. Diharapkan bagi RS UNAND tetap mempertahankan dan meningkatkan konsistensi pelaksanaan timbang terima sesuai standar prosedur operasional.

Factors Affecting Nurse Compliance in the Implementation of Weighing Receipts Based on Standard Operating Procedures in the Inpatient Room of UNAND Hospital

ABSTRACT

Timbang acceptance, plays an important role in the implementation of nursing care. Weight loss contributes 80% to the occurrence of medical errors. The purpose of this study is to determine the relationship between nurse characteristics, motivation, and supervision with nurse compliance in the implementation of weigh-in based on standard operational procedures in the inpatient room of UNAND Hospital. This study is an analytical descriptive research with a cross sectional approach. The sample amounted to 42 nurses with a total sampling technique. The research instrument used motivation and supervision questionnaires and used the UNAND Hospital Weight-Loss SOP sheet. Data were analyzed univariately with frequency distribution and bivariately with chi-square. The results of the study were almost all nurses aged 26-35 years and female. Most nurses were nursing education, had a work period of >3 years, had high motivation, received good supervision, and were compliant in implementing handover based on SOP. There was a significant relationship between motivation and supervision with nurse compliance in implementing handover SOP (p=0.013, p=0.001). There was no significant relationship between age, gender, education, and work period with nurse compliance in implementing handover SOP (p=0.227, p=0.246, p=0461, p=0.927) where the p value>0.05. It is expected that UNAND Hospital will continue to maintain and improve the consistency of handover implementation according to standard operating procedures.
