ANALISIS KESIAPAN IMPLEMENTASI INTEGRASI LAYANAN KESEHATAN PRIMER (ILP) DI PUSKESMAS SUNGAI LASI KABUPATEN SOLOK

xi + 164 halaman, 23 tabel, 13 gambar, 10 lampiran

ABSTRAK

Tujuan Penelitian

ILP di Puskesmas Sungai Lasi belum terlaksana di tingkat puskesmas pembantu. Tujuan penelitian menganalisis kesiapan penerapan ILP di Puskesmas Sungai Lasi.

Metode

Penelitian dilaksanakan di Puskesmas Sungai Lasi pada November 2024 hingga Mei 2025 menggunakan metode kualitatif pendekatan studi kasus dengan 7 informan menggunakan *purposive sampling*. Pengumpulan data melalui wawancara mendalam, observasi, dan telaah dokumen dengan analisis interaktif. Keabsahan data dengan triangulasi sumber dan teknik.

Hasil

Ketidakcukupan dan ketidaktersediaan dokter dan apoteker. Kelengkapan sarana prasarana $\leq 80\%$, tidak tersedia ruang MOOC dan fisioterapi. Teknologi digital kesehatan sudah terdaftar, terkoneksi, dan terintegrasi, namun data observasi dan resep obat belum diaktifkan. Keterbatasan anggaran untuk kader ILP dan petugas pustu, karena ketidakjelasan sumber anggaran. Regulasi internal telah tersedia, namun SOP masih perlu disesuaikan. Pelayanan berbasis klaster sudah tersedia, tapi belum optimal. Komitmen puskesmas dan lintas sektor sudah terbentuk, namun masih memerlukan tindak lanjut.

Kesimpulan

Puskesmas Sungai Lasi belum siap dalam implementasi ILP dari aspek kontekstual, pelayanan ILP, dan komitmen. Diharapkan Puskesmas Sungai Lasi melakukan penyesuaian kembali tenaga kesehatan yang ada di klaster 2 dan klaster 3 agar pelayanan yang dihasilkan optimal.

AN ANALYSIS OF READINESS FOR IMPLEMENTING INTEGRATED PRIMARY HEALTH CARE SERVICES (ILP) AT SUNGAI LASI PUBLIC HEALTH CENTER, SOLOK REGENCY

xi + 164 pages, 23 tables 13 pictures, 10 appendices

ABSTRACT

Objective

The ILP program at Sungai Lasi PHC has not been fully implemented, especially in puskesmas pembantu. This study aimed to analyze the readiness of ILP implementation at Sungai Lasi PHC.

Method

A qualitative case study was conducted from November 2024 to May 2025 at Sungai Lasi PHC. Seven informants were selected through purposive sampling. Data collection involved in-depth interviews, observation, and document review, followed by interactive analysis. Data validity was ensured through source and method triangulation.

Results

Findings revealed limited availability of key health personnel, including doctors and pharmacists. Facility readiness was below 80%, with several essential rooms MOOC, physiotherapy unavailable. The digital health system was registered, connected, and integrated, but observational data and prescription features were inactive. Funding mechanisms for ILP cadres and auxiliary staff were unclear. Although internal regulations existed, SOPs required improvement. Cluster-based services had started but were suboptimal. Commitment from PHC and cross-sector stakeholders was formed but lacked follow-up.

Conclusion

Sungai Lasi PHC is not yet fully ready for ILP implementation in terms of contextual, service readiness, and commitment. Realignment of health personnel in clusters 2 and 3 is recommended to enhance service delivery.
