**ABSTRAK**

Penelitian ini bertujuan untuk mengetahui tingkat keberhasilan IB berdasarkan bangsa akseptor dan semen sapi di Kecamatan Lima Kaum Kabupaten Tanah Datar, dilaksanakan pada tanggal 2 Mei 2025. Penelitian ini menggunakan metode survei dan pengambilan sampel berdasarkan catatan *recording* tahun 2019-2024. Variabel yang diamati mencakup *Conception Rate* (CR), *Service Per Conception* (S/C), *Calving Rate*, *Calving Interval* (CI), dan *Sex Ratio*. Data penelitian dianalisis menggunakan uji T beda 2 proporsi dan uji T beda 2 nilai tengah. Hasil penelitian menunjukkan bahwa CR pada semen sapi Simmental yang di IB ke akseptor sapi P. Simmental berpengaruh nyata ( $P<0,05$ ) terhadap akseptor sapi PO di IB dengan semen sapi Simmental dan sapi Limousin. S/C pada semen sapi Simmental yang di IB ke akseptor sapi P. Simmental berpengaruh nyata ( $P<0,05$ ) terhadap akseptor sapi P. Simmental di IB dengan semen sapi Limousin. Kesimpulan penelitian ini adalah bangsa memberikan pengaruh terhadap tingkat keberhasilan IB. Hasil CR dan S/C lebih baik jika bangsa sapi akseptor di IB dengan bangsa dari semen pejantan memiliki asal yang sama.

## **ABSTRACT**

This study aims to determine the success rate of artificial insemination (AI) based on the breed of the acceptor and the semen used in Lima Kaum Subdistrict, Tanah Datar Regency, conducted on May 2, 2025. This study employed a survey method and sample collection based on records from 2019 to 2024. The variables observed included Conception RatAe (CR), Service Per Conception (S/C), Calving Rate, Calving Interval (CI), and Sex Ratio. The research data were analyzed using a two-proportion t-test and a two-mean t-test. The results of the study indicated that the CR of Simmental bull semen used in AI on Simmental cross acceptor cows has a significant effect ( $P<0.05$ ) on Ongole cross acceptor cows in AI with Simmental and Limousin bull semen. S/C in Simmental bull semen used for AI in Simmental cross acceptor cows had a significant effect ( $P<0.05$ ) on Simmental cross acceptor cows in AI with Limousin bull semen. The conclusion of this study was that breed influences the success rate of AI. CR and S/C results were better when the breed of the acceptor cow in AI matches the breed of the bull semen.
