**ABSTRAK**

**Tujuan**

Penelitian ini bertujuan untuk mengetahui hubungan pengetahuan, status gizi dan asupan zat besi dengan kejadian anemia pada ibu hamil trimester I dan III di Wilayah Kerja Puskesmas Belimbings

**Metode**

Penelitian ini menggunakan desain *cross-sectional*. Sampel dalam penelitian ini ialah 43 ibu hamil trimester I dan III Wilayah Kerja Puskesmas Belimbings yang diambil dengan teknik *proportional random sampling*. Data dianalisis secara univariat dan bivariat menggunakan uji Chi-Square untuk mengetahui hubungan antara variabel.

**Hasil**

Hasil analisis menunjukkan 67,4% ibu hamil yang mengalami anemia, 46,5% memiliki pengetahuan yang kurang tentang anemia, 62,8% dengan status gizi tidak normal dan 53,5% ibu hamil memiliki asupan zat besi yang kurang. Terdapat hubungan yang bermakna antara pengetahuan ( $p=0,009$ ), status gizi ( $p=0,001$ ) dan asupan zat besi ( $p=0,01$ ) dengan kejadian anemia pada ibu hamil trimester I dan III di Wilayah Kerja Puskesmas Belimbings.

**Kesimpulan**

Pengetahuan, status gizi dan asupan zat besi memiliki hubungan yang signifikan dengan kejadian anemia pada ibu hamil trimester I dan III di Wilayah Puskesmas Belimbings Tahun 2025

**THE RELATIONSHIP BETWEEN KNOWLEDGE, NUTRITIONAL STATUS,  
AND IRON INTAKE WITH THE INCIDENCE OF ANEMIA IN FIRST AND  
THIRD TRIMESTER PREGNANT WOMEN AT BELIMBING PUBLIC  
HEALTH CENTER 2025**

**ix + 84 pages, 15 tables, 3 pictures, 7 attachments**

**ABSTRACT**

**Objective**

This study aims to determine the relationship between knowledge, nutritional status, and iron intake with the incidence of anemia in first and third trimester pregnant women in the working area of Belimbang Public Health Center.

**Method**

This study used a cross-sectional design. The sample in this study were 43 pregnant women in the first and third trimesters of the Belimbang Health Center Working Area who were taken with proportional random sampling technique. Data were analyzed univariately and bivariately using the Chi-Square test to determine the relationship between variables.

**Result**

The analysis showed that 67.4% of pregnant women experienced anemia, 46.5% had poor knowledge about anemia, 62.8% had abnormal nutritional status, and 53.5% had insufficient iron intake. There was a significant relationship between knowledge ( $p=0.009$ ), nutritional status ( $p=0.001$ ), and iron intake ( $p=0.01$ ) with the incidence of anemia among first and third trimester pregnant women in the working area of Belimbang Public Health Center.

**Conclusion**

Knowledge, nutritional status and iron intake have a significant relationship with the incidence of anemia in first and third trimester pregnant women in the Belimbang Health Center Area in 2025.
