ANALISIS KESIAPAN LAYANAN KESEHATAN REPRODUKSI PRA BENCANA PADA PEREMPUAN PENYANDANG DISABILITAS DI WILAYAH KELURAHAN PURUS KOTA PADANG TAHUN 2025

xiii + 155 halaman, 25 tabel, 21 gambar, 18 lampiran

ABSTRAK

Tujuan Penelitian

Secara global, 84% penyandang disabilitas belum memiliki rencana kesiapsiagaan bencana. Di Kelurahan Purus terdapat 39 penyandang disabilitas dengan 43% diantaranya perempuan dengan risiko tiga kali lipat lebih rentan mengalami kekerasan seksual dibandingkan perempuan non disabilitas. Penelitian ini bertujuan menganalisis kesiapan Pemerintah Kota Padang dalam mengelola layanan kesehatan reproduksi pra bencana bagi perempuan penyandang disabilitas Tahun 2025, menggunakan pendekatan manajemen POAC.

Metode Penelitian

Metode yang digunakan adalah kualitatif deskriptif dengan informan dari BPBD, Dinas Kesehatan, Puskesmas Padang Pasir, dan PPDI Kota Padang melalui *purposive sampling*. Penelitian dilakukan di Wilayah Kelurahan Purus, Kota Padang. Data dikumpulkan melalui wawancara mendalam, observasi, dan telaah dokumen.

Hasil

Hasil menunjukkan layanan kesehatan reproduksi pra bencana pada perempuan disabilitas belum optimal. Pendataan masih umum, program belum spesifik, SOP belum mengakomodasi kebutuhan disabilitas, serta fasilitas dan sistem peringatan dini belum sepenuhnya aksesibel. Kolaborasi lintas sektor dan wadah bagi organisasi disabilitas untuk menyuarakan kebutuhan disabilitas juga belum tersedia.

Kesimpulan

Kesiapan layanan kesehatan reproduksi pra bencana pada perempuan penyandang disabilitas menghadapi tantangan dalam seluruh aspek POAC. Penguatan kolaborasi lintas sektor dan implementasi kebijakan yang lebih inklusif diperlukan agar layanan lebih efektif.

PRE-DISASTER READINESS ANALYSIS OF REPRODUCTIVE HEALTH SERVICES FOR WOMEN WITH DISABILITIES IN PURUS SUBDISTRICT, PADANG CITY, 2025

xiii + 155 pages, 25 tables, 21 pictures, 18 appendices

ABSTRACT

Objective

Globally, 84% of people with disabilities did not have a disaster preparedness plan. In Purus subdistrict, there were 39 people with disabilities, 43% of whom were women with a threefold higher risk of sexual violence compared to non-disabled women. This study aimed to analyse the preparedness of the Padang City Government in managing reproductive health services for women with disabilities in the pre-disaster phase, using the POAC management approach.

Method

A descriptive qualitative method is used with informants from BPBD, the Health Office, Puskesmas Padang Pasir, and PPDI Padang City, selected through purposive sampling. Data are collected through in-depth interviews, observations, and document review.

Results

The results show that reproductive health service preparedness for women with disabilities in the pre-disaster phase is not yet optimal. Data collection remains general, programs are not specific, SOPs do not address disability needs, and facilities and early warning systems are not fully accessible. Cross-sector collaboration and a platform for PPDI to voice disability needs are also absent.

Conclusion

Preparedness of pre-disaster reproductive health services for women with disabilities faces challenges in all aspects of POAC. Strengthening cross-sector collaboration and implementing more inclusive policies are required to improve service effectiveness.
